

17 December 2014

Mr Kym Taylor  
General Manager  
Office of the Environmental Protection Authority  
Locked Bag 10  
EAST PERTH WA 6850

**Attention: Kevin Da Silva**

Dear Kym,

**Re: Submission of Tropicana Gold Mine (Ministerial Statement No. 839) 2013-2014 Annual Compliance Assessment Report**

In accordance with Condition 4-6 of Ministerial Statement No. 839, please find enclosed the 2014 Annual Compliance Assessment Report for the Tropicana Gold Mine. The report has been prepared in accordance with the Tropicana Gold Mine Compliance Assessment Plan and covers the period 24<sup>th</sup> September 2013 – 23<sup>rd</sup> September 2014.

This Compliance Assessment Report will be made publically available on the Tropicana JV website following acknowledgement from the Office of the Environmental Protection Authority that the report has been received and accepted.

We trust this report meets your requirements however should you have any queries regarding the information provided please contact me on (08) 9265 2213 or via [TGMApprovals@anglogoldashanti.com.au](mailto:TGMApprovals@anglogoldashanti.com.au)

Yours sincerely

Emma Bamforth  
Senior Environmental Coordinator – Approvals

## 1 INTRODUCTION

The Tropicana Gold Mine (TGM) is an open cut gold mine located approximately 330km east-north-east of Kalgoorlie on the western edge of the Great Victoria Desert (see Figure 1). The operation is a joint venture (Tropicana JV) between AngloGold Ashanti Australia (70% stakeholder and manager) and Independence Group (30% stakeholder).

The project was approved under the *Environmental Protection Act 1986* (EP Act) in September 2010 and issued with Ministerial Statement No. 839 (MS839). Condition M4.6 of MS839 requires the preparation and submission of an annual compliance assessment report for the preceding 12-months.

This report has been prepared to meet Condition M4.6 requirement and covers the period 24<sup>th</sup> September 2013 to 23<sup>rd</sup> September 2014. The TGM ministerial statement audit compliance table updated for the 2014 reporting period is provided in Appendix 1.

The TGM is comprised of:

- Operational area - containing the open pits, waste landforms, stockpiles, tailings storage facility, processing plant, mine village, aerodrome and other supporting infrastructure.
- Infrastructure corridor - including an access road and communications corridor linking the operational area to existing communications and road networks of the Goldfields regions. This corridor is referred to as the Pinjin Corridor.
- Process water supply area – containing the process water supply borefield (PWSB).

This is the fourth compliance assessment report (CAR) prepared by AngloGold Ashanti Australia on behalf of the Tropicana JV for the project and has been prepared in accordance with the approved Compliance Assessment Plan (CAP) dated 13 December 2010 prepared and submitted to the Office of the EPA in 2010.

## 2 CURRENT STATUS

During the reporting period commissioning activities of the processing plant and tailings storage facility were completed and production commenced in September 2013. The first gold bar was produced on 26<sup>th</sup> September 2013 and the mine was officially opened by the Minister for Mines on 6<sup>th</sup> March 2014.

The main process water supply borefield north of the operational area became fully operational during 2014 and two additional bores were installed at the Kamikaze borefield, located to the south of the operational area, to provide additional fresh water source. Further expansion of the process water supply borefield will be required to meet the sites water requirements and relevant approvals including a Section 45c amendment, mining proposal and 5C water abstraction licence are currently being sought to enable this expansion to occur.

Construction of the stage two wall raising of the tailings storage facility (TSF) was conducted during the reporting period following receipt of relevant approvals.

Access challenges were encountered throughout much of 2014 with heavy rainfall flooding the site access road between Kalgoorlie and Pinjin Station. An alternative route through Carosue Dam was established during this period.

Table 2.1 provides an overview of the Project's key characteristics and current status while the infrastructure footprint is shown on Figure 2 and in Plates 1 and 2.

**Table 2.1: Tropicana Gold Project Key Characteristics – Status Report**

| Element                         | Description  | Status / Comment   |
|---------------------------------|--|--|
| <b>General</b>                  |  |  |
| Project Life                    | Approximately 15yr of mining; total project duration up to 25yr (including post closure monitoring)  | Construction commenced in May 2011, mining commenced in July 2012, processing commenced in September 2013 and first gold bar poured September 2013 |
| <b>Mining and Processing</b>    |  |  |
| Mining Rate                     | Up to 75 million tonnes per annum (ore and waste)  | Mining commenced in July 2012. Mining rate unchanged   |
| Stripping ratio                 | 8:1  | Unchanged  |
| Number of pits                  | Up to 4  | 3 separate pits currently envisaged  |
| Open pit void/s                 | Not more than 400 hectares   | Unchanged.<br>Current open pit area is 153.4ha   |
| Max. length of pit/s            | 6km (if pits combine)  | Unchanged  |
| Max width of pit/s              | 1.5km  | Unchanged.<br>Current maximum width of Havana pit is approx. 700m  |
| Overburden & waste              | Not more than 800 million tonnes   | Unchanged  |
| Waste landform                  | Not more than 1,200ha, max height 375mRL, slope with max angle 15°   | Unchanged  |
| <b>Infrastructure</b>           |  |  |
| Mine access road                | Pinjin option ~210km of new road   | Road construction was completed during the 2012 reporting period.  |
| Communications                  | Fibre Optic or Microwave via either Pinjin or Tropicana Transline Corridor   | The microwave tower option was selected and was constructed along the Pinjin Corridor during 2012.   |
| Aerodrome                       | All weather strip 2.4km long   | Aerodrome completed and commissioned   |
| Main power supply               | Onsite power station with an installed capacity of up to 40 MW   | Power station was constructed and commissioned during 2013.  |
| Water pipeline                  | Approximately 50km in length from the borefield to the processing plant  | Pipeline installation was completed in May 2013 and process water supply area become fully operational during the 2014 reporting period.           |
| Tailings Storage Facility (TSF) | Up to 7 million tonnes per annum, two cell paddock tailings storage facility, maximum height 372mRL, approximately 1330m wide by 1850m   | Approval to modify the TSF design to a single celled facility was obtained during 2012 via a Section 45C process.                                  |
| <b>Disturbance Areas</b>        |  |  |
| Disturbance Area                | Not more than 3,440ha comprising: <ul style="list-style-type: none"> <li>• 2,570ha – operational area</li> <li>• 200ha* – water supply area</li> <li>• 670ha – infrastructure areas</li> </ul> | Current disturbance footprint across project area is approximately 2,532ha well within the approved 3,440ha.                                       |

NOTE \* - currently seeking approval through Section 45C process to increase footprint to 300ha

### 3 COMPLIANCE

The 2013-2104 reporting period represents the fourth reporting period for the TGM and the first full operating period for the TGM, with the processing plant commencing during September 2013. In April 2014, the OEPA conducted a desktop audit of the 2013 compliance assessment report and additional information from AGAA was requested to demonstrate compliance with conditions. The additional requested information included:

- The threatened species and communities management strategy – evidence of consultation with Department of Parks and Wildlife (DPaW)
- Threatened species and communities management strategy – evidence that the strategy is being implemented
- Water monitoring results analysed against the Australian Water Quality Guidelines for Fresh and Marine Waters
- Groundwater and surface water monitoring program – annually audited; and
- Monitoring activities commenced prior to ground disturbing activities

Following submission of the requested additional information, the 2013 report was accepted and TGM was deemed to be compliant with all MS839 conditions. A copy of the OEPA correspondence is provided in Appendix 2.

During the 2014 reporting period the Tropicana JV was compliant with all ministerial conditions and a completed audit table providing further detail on compliance with conditions is included in Appendix 1.

To enable compliance with condition No 8.2, associated with groundwater monitoring, an additional four groundwater monitoring bores were installed around the final waste landform footprints on the north and eastern sides of the operational area (See Figure 4) during the 2014 reporting period.

A section 45c seeking approval to expand the TGM process water supply borefield was developed during the reporting period and was submitted to the OEPA in October, just outside the reporting period. Key aspects of the expansion include installation of 25 production bores with pumping infrastructure, establishing up to 10 monitoring bores, internal access tracks and pipelines between the bores, overhead powerlines, borrow pits for track maintenance and controlled release areas. Figure 3 (a-c) shows the proposed expansion activities. Approval is also being sought to increase the annual abstraction rate from 7GL/annum to 9GL/annum and to increase the disturbance footprint within the process water supply area up to 300ha.

As construction activities within the operational area and process water supply borefields were only completed during 2013, opportunities for rehabilitation within these areas have been limited. Rehabilitation activities have however commenced along the Pinjin Corridor where a number of borrow pits, laydown areas, fly camps and turkey nests no longer required have been ripped and growth medium and cleared vegetation has been re-spread. Details of the Pinjin corridor rehabilitation was provided in the 2013 CAR. During 2014, rehabilitation activities within borrow pits and access tracks located in the operational area, that are surplus to requirements has recently commenced and will continue to be progressed during 2015. A copy of the rehabilitation plan for the operational area borrow pit rehabilitation activities is provided in Appendix 3.

The Kalgoorlie Boulder Urban Landcare Group was commissioned to grow a number of seedlings from seed collected within the Tropicana project area as a trial for rehabilitation activities during the reporting period (Plate 3). The seedlings will be available for transport to Tropicana early in 2015.

In accordance with the CAP, this CAR for the 2014 reporting period will be made publicly available once the Tropicana JV has received acknowledgement from the OEPA that the report has been accepted. A copy of the CAR 2014 will then be placed on the Tropicana JV website.

No changes have been made to the previously approved CAP during this reporting period (Condition 4.1 of MS839).

## 4 ENVIRONMENTAL MONITORING

During the 2014 reporting period dust, vegetation condition, fauna trench inspections and groundwater monitoring programs were continued to be implemented. Locations of four new groundwater monitoring bores on the northern and eastern side of the operational footprint around the final waste landform footprint were installed to ensure the requirements of condition M8.2 are met. Details of monitoring activities conducted through 2014 will be documented in the site Annual Environmental Report (AER) due in January 2015.

Groundwater monitoring from the eight ministerial monitoring bores installed around the TSF and waste landform footprints (See Figure 4) was undertaken throughout 2014. A summary of results from water samples taken are provided in Appendix 4. Results obtained from the ministerial monitoring bores are consistent with background groundwater quality results obtained from other monitoring bores within the operational area and those obtained during the 2013 reporting period. Further information on the sites water quality monitoring activities and results obtained will be included in the AER due for submission by the end of January 2015.

Surface water monitoring sites have been established around the TSF and waste landforms (Figure 5) as required by M8.2, however due to the absence of continuous standing surface water, samples from these locations have only been obtained following significant rainfall events. Results from surface water sampling locations are provided in Appendix 5.

The vegetation condition monitoring program conducted to meet Ministerial condition 5-2 was undertaken by Eco Logical Australian Pty Ltd in September/October 2014. The 2014 monitoring program followed the same methodology as the 2013 program and involved assessment of high resolution digital multi-spectral imagery and field survey verification at 112 quadrats 20m by 20m in size. Four additional vegetation monitoring locations were established within the process supply borefield during the 2014 survey in anticipation of the borefields expansion. The location of the vegetation monitoring sites utilised during the 2014 monitoring program are shown in Figure 6. Analysis of the data obtained during the 2014 survey is still being undertaken and results of the survey will be provided in the sites 2014 AER. To date, variations in vegetation condition due to environmental conditions, such as fire and rainfall, have been detected sporadically across the region, however no impacts associated with the mines operation have been identified.

Fauna monitoring conducted during the reporting period has included:

- Fauna survey of the Process Water Supply Borefield and an adjacent expansion area.
- Daily fauna inspections of the TSF
- Photographic monitoring of artificial water source (Plates 4-7)
- Photographic monitoring of a Malleefowl mound (Plates 8-9)
- Ad hoc fauna sightings recorded by staff via the fauna sighting report forms

A number of artificial water sources have been established around the TSF to provide an alternative water source for wildlife and these are monitored via motion sensing cameras.

Photographic monitoring has captured a number of fauna species utilising the artificial ponds including a variety of birds, mammals and reptiles.

During the reporting period a review of the TGM Threatened species and communities management strategy (TSCMS) was undertaken and the strategy was amended. The amended strategy was submitted to the Department of Parks and Wildlife for review and comments have recently been received. The strategy has now been updated to reflect DPaWs comments and the final updated version along with associated correspondence with DPaW is attached in Appendix 6. A copy of the amended TSCMS will be uploaded to the TGM website.

A review of the sites Environmental Monitoring Strategy and an internal audit of the sites groundwater monitoring methods and results against the Australian Water Quality Guidelines were also undertaken during the reporting period. Audit findings are provided in Appendix 7. Once the Environmental Monitoring Strategy has been updated, a copy will be provided to the relevant agencies.

As part of the Section 45c process for the process water supply borefields expansion, additional flora and fauna surveys were undertaken in the area. No additional threatened species were identified. Groundwater drawdown modelling was also updated for the borefield during the reporting period.

Trench inspections for trapped fauna were undertaken for minor pipeline installation projects conducted within the mining area, as part of dewatering infrastructure installation, and within the Kamikaze borefield, to connect additional bores to existing pipeline infrastructure. No fauna were observed or required relocation from within the trenches. A summary of the fauna trench inspection report is provided in Appendix 8.

During the reporting period, a mine closure plan was developed for the TGM in accordance with the DMP requirements and a copy was provided with the sites AER submitted in January 2014.

## 5 ENDORSEMENT

This Report has been endorsed by:

Mr Duncan Gibbs  
General Manager  
Tropicana Gold Mine  
AngloGold Ashanti Australia

I have reviewed this document and accept that the information provided is an accurate account of the activities undertaken during the current reporting period (24<sup>th</sup> September 2013 to 23<sup>rd</sup> September 2014)

Date: 17<sup>th</sup> December, 2014

A handwritten signature in black ink, appearing to read 'D. Gibbs', is written over a horizontal line.

Duncan Gibbs  
General Manager  
Tropicana Gold Mine  
AngloGold Ashanti Australia

Dear Ms Bastow

**TROPICANA GOLD PROJECT – STATEMENT 839 – RESULT OF DESKTOP VERIFICATION AUDIT**

The Office of the Environmental Protection Authority (OEPA) has completed a Verification Desktop Audit (VDA) to verify AngloGold Ashanti Australia Limited's (AG) compliance with the implementation conditions of the above.

The VDA identified that the evidence provided on 1 April 2014 by AG was insufficient to determine compliance. Accordingly the OEPA requests that AG provide additional evidence to verify compliance. The VDA Report details the compliance status of the implementation conditions, and is enclosed for your information.

Accurate records and evidence of implementation to demonstrate compliance with the conditions are required for those marked as 'VR' in the enclosed Verification Desktop Audit and listed below:

- 839:M6.1   Threatened Species**
- 839:M6.2   Threatened Species**
- 839:M8.1   Groundwater and Surface Water Quality**
- 839:M8.2   Groundwater and Surface Water Quality**
- 839:M8.3   Groundwater and Surface Water Quality**

The OEPA requests that AG submit this information by **28 May 2014**. If you have any queries regarding this matter, please contact Hugh Lance on 6145 0846.

Yours sincerely

**Ian Munro**  
**MANAGER, COMPLIANCE BRANCH**

### Introduction

This Verification Audit Report covers the status of compliance with Ministerial Statement 839 which was issued 24 September 2010 to Tropicana Joint Venture (AngloGold Ashanti Australia Ltd and Independence Group NL) for the Tropicana Gold Project, Shire of Menzies, Shire of Laverton and the City of Kalgoorlie – Boulder. The proposal is for the construction and operation of an open cut gold mine and associated infrastructure, approximately 330 km east northeast of Kalgoorlie and 200km east of Laverton with production commencing in September 2013. A change to the proposal under Section 45C of the *Environmental Protection Act 1986* was approved 19 November 2012 to alter the proposed Tailings Storage Facility (TSF) from a two cell paddock to single celled facility.

### Audit Findings

The following Audit Table presents the overall assessment of compliance, and details any non-compliances identified through completing a Verification Audit Report. The criteria used to assess compliance are taken from the implementation conditions of the Statement.

# AUDIT TABLE

**PROPOSAL:** Tropicana Gold Project, Shire of Menzies, Shire of Laverton and The City of Kalgoorlie-Boulder  
**STATEMENT:** 839

**Note:**

- Phases that apply in this table = **Pre-Construction, Construction, Operation, Decommissioning, Overall (several phases)**
- This audit table is a summary and timetable of conditions and commitments applying to this project. Refer to the Minister's Statement for full detail/precise wording of individual elements.
- Code prefixes: M = Minister's condition; P = Proponent's commitment;
- Abbreviations: CAR = Compliance Assessment Report; CEO = Chief Executive Officer of OEPA; DER = Department of Environment Regulation; DIA = Department of Indigenous Affairs; DMP = Department of Mining and Petroleum; DoH = Department of Health; DoW = Department of Water, EPA = Environmental Protection Authority, Minister for Env = Minister for the Environment; OEPA = Office of the Environmental Protection Authority.
- Compliance Status: C = Compliant, CLD = Completed, NC = Non-compliant, NR = Not Required at this stage. Please note the terms NA = Not Audited and VR = Verification Required are only for OEPA use.

| Number   | Issue                                    | Phase   | Action  | Plan Requirements | Notes  | Status |
|----------|--|---------|---|-------------------|--|--------|
| 839:M1.1 | Proposal Implementation                  | Overall | The proponent shall implement the proposal as assessed by the Environmental Protection Authority and described in Schedule 1 of this statement subject to the condition and procedures of this statement.   |                   | Tropicana Gold Mine 2012-2013 Annual Compliance Assessment Report (2013-00000493653) (2013 CAR) indicates compliance with this condition. A s45c amendment was approved on 19 November 2012 which modified the TSF design to a single celled facility. | C      |
| 839:M2.1 | Proponent Nomination and Contact Details | Overall | The proponent for the time being nominated by the Minister for Environment under sections 38(6) or 38(7) of the Environmental Protection Act 1986 is responsible for the implementation of the proposal.  |                   | 2013 CAR (2013-00000493653) indicates compliance with this condition. The nominated proponent did not change during the reporting period.  | C      |
| 839:M2.2 | Proponent Nomination and Contact Details | Overall | The proponent shall notify the Chief Executive Officer of the Office of the Environmental Protection Authority of any change of the name and address of the proponent for the serving of notices or other correspondence within 30 days of such change. |                   | 2013 CAR (2013-00000493653) indicates compliance with this condition. There was no change to the contact name or address of the nominated proponent during the reporting period.   | C      |

**PROPOSAL:** Tropicana Gold Project, Shire of Menzies, Shire of Laverton and The City of Kalgoorlie-Boulder  
**STATEMENT:** 839

| Number   | Issue                       | Phase            | Action  | Plan Requirements | Notes  | Status |
|----------|-----------------------------|------------------|---|-------------------|--|--------|
| 839:M3.1 | Time Limit of Authorisation | Overall          | The authorisation to implement the proposal provided for in this statement shall lapse and be void five years after the date of this statement if the proposal to which this statement relates is not substantially commenced.  |                   | Written notification was submitted to the OEPA advising of the commencement of construction in a letter dated 12 March 2012 (A379318).                 | CLD    |
| 839:M3.2 | Time Limit of Authorisation | Overall          | The proponent shall provide the Chief Executive Officer of the Office of the Environmental Protection Authority with written evidence which demonstrates that the proposal has substantially commenced on or before the expiration of five years from the date of this statement.   |                   | Written notification was submitted to the OEPA advising of the commencement of construction in a letter dated 12 March 2012 (A379318).                 | CLD    |
| 839:M4.1 | Compliance Reporting        | Overall          | The proponent shall prepare and maintain a compliance assessment plan to the satisfaction of the Chief Executive Officer of the Office of the Environmental Protection Authority.   |                   | OEPA confirmed the Compliance Assessment Plan submitted on 13 December 2010 (A366869) meets requirements in a letter dated 14 February 2011 (A368262). | C      |
| 839:M4.2 | Compliance Reporting        | Pre-construction | The proponent shall submit to the Chief Executive Officer of the Office of the Environmental Protection Authority, the compliance assessment plan required by condition 4-1 at least 6 months prior to the first compliance report required by condition 4-6, or prior to ground disturbing activity, whichever is sooner. The compliance assessment plan shall indicate: 1. the frequency of compliance reporting; 2. the approach and timing of compliance assessments; 3. the retention of compliance assessments; 4. the method of reporting of potential non-compliances and corrective actions taken; 5. the table of contents of compliance reports; and 6. public availability of compliance reports. |                   | OEPA confirmed the Compliance Assessment Plan submitted on 13 December 2010 (A366869) meets requirements in a letter dated 14 February 2011 (A368262). | CLD    |

| 839:M10<br>.5 | Final Closure and Decommissioning Plan | Overall | The proponent shall make the Final Closure and Decommissioning Plan required by conditions 10-1 and 10-2 publicly available in a manner approved by the Chief Executive Officer of the Office of the Environmental Protection Authority.   |                   | The project is in its third year of construction/operation at the time of this audit. | NR     |

## **Conclusions and Recommendations**

In conclusion the Verification Audit Report was unable to determine compliance with a number of implementation conditions relating to Statement 839. These conditions have been given a compliance status of 'verification required' and are detailed in the previous report. Further information is required to verify the compliance status of the implementation conditions which are presented in the Desktop Audit Table and listed below:

|                 |  |
|-----------------|--|
| <b>839:M6.1</b> | <b>Threatened Species</b>                    |
| <b>839:M6.2</b> | <b>Threatened Species</b>                    |
| <b>839:M8.1</b> | <b>Groundwater and Surface Water Quality</b> |
| <b>839:M8.2</b> | <b>Groundwater and Surface Water Quality</b> |
| <b>839:M8.3</b> | <b>Groundwater and Surface Water Quality</b> |

Verification information for the above conditions is required to be submitted to the OEPA by **28 May 2014**. The OEPA may conduct a site inspection to confirm implementation of the above conditions at a date yet to be determined.

Dear Ian

**Re: Tropicana Gold Project – MS839 – Response to Desktop Audit and Request for Compliance Information**

Further to your letter dated May 2014, AngloGold Ashanti Australia (AGAA) provides the following responses and additional information to assist the department in verifying Tropicana Gold Mine (TGM) compliance against the site's Ministerial Statement (MS839).

**Condition 6.1 (number 839:M6.1)**

AGAA acknowledges that the information supplied thus far has not provided the Department with adequate evidence that the site has implemented the Threatened Species and Community Management Strategy (TS&CMS). To address this, please find attached a number of additional documents as further evidence of how the TS&CMS has been implemented at TGM (Attachment 1):

- Construction Permit to Clear process and example permits;
- Site Environmental Hazardous Substance Management Plan; and
- TGM Water Storage Area Fence Specifications.

As suggested, should the Department require a site visit to further verify compliance, AGAA would be happy to facilitate such a visit.

**Condition 6.2 (number 839:M6.2)**

The revised version of the Threatened Species and Community management strategy as provided in April was updated taking into consideration information obtained from the following DPaW and related resources or plans such as but not limited to:

- September 2013 Specially Protected Fauna and Rare Flora list;
- Declared Rare and Poorly Known Flora in the Goldfield;
- National Malleefowl Recovery Plan;
- National Recovery plan for Marsupial Moles; and
- National Recovery Plan for the Sandhill Dunnart.

A complete list of reference material used is provided in Attachment 2. As a part of this update formal input has been requested from DPaW however this has not yet been

obtained. A meeting has been scheduled for the 30 May with Julie Futter (Environmental Impact Assessment Project Co-ordinator) and other members of the DPaW Environmental Management Branch to progress input (Attachment 3). Following this meeting and the provision of written feedback the strategy document could be revised further and will be provided to the OEPA with the 2014 CAR.

### **Condition 8.1 – 8.2 (number 839:M8.1 and 839:M8.2)**

Regarding the Auditing of compliance against:

- Australian Water Quality Guidelines for Fresh and Marine Waters (2000);
- Australian Guidelines for Water Quality Monitoring and Reporting (2000)
- The TGM groundwater and surface water monitoring program and report

Table 1 of the CAR does not specify the frequency of internal audits against the nominated documents and AGAA has scheduled its first internal audit for the 2014 reporting period. This is to coincide with the completion of construction and post commissioning.

AGAA acknowledges that regular internal audits are required, however, it had been determined that a suitable pre-operations baseline set of data was also needed. The data was to fully represent the natural variation in rainfall and variability in groundwater change. This has now been achieved through the monitoring of pre-2011 bores and the additional groundwater monitoring bores and surface water monitoring points established since 2011.

During 2014, TGM is embarking on the journey to ISO14001 certification, a significant part of which is the identification and implementation of an internal audit, inspection and monitoring schedule. Please be advised that as a part of this process, AGAA has scheduled an internal audit of the monitoring activities associated with condition 8 for the current reporting period and will provide the Department with a copy of this audit in the 2014 CAR.

### **Condition 8.3 (number 839:M8.3)**

AGAA has made use of a combination of historic and newly established monitoring bores and surface water monitoring locations for compliance with Condition 8. Seven bores were established prior to the commencement of construction activities in 2011. Since then an additional 17 monitoring bore locations have been established during 2012 and 2013 to ensure adequate coverage. Attachment 4 provides a visual distribution of the groundwater monitoring locations, the year installed and the current surface water monitoring locations.

Surface water monitoring sites have been established, taking into consideration the current site layout, and will be expanded as activities change over the life of the mine. Attachment 5 provides evidence of the current surface water monitoring locations. During Q3 2014, and as a part of the ISO14001 implementation, a review will be undertaken of the current monitoring locations to ensure they provide a holistic assessment of upstream and downstream changes in water quality potentially linked to TGM's activities. It should be noted that the collection of surface water samples in a desert environment such as Tropicana, which lacks surface water drainage features and a high infiltration rate, is more challenging than was originally expected.

To complement the locations data provided, AGAA has attached example monitoring results associated with groundwater and surface water sampling complete since 2011 (Attachment 6).

Should you require further information or require a site inspection to close out these matter, please do not hesitate to contact us.

Yours sincerely

Belinda Bastow

Dear Ms Bastow

**RESPONSE TO DESKTOP AUDIT AND REQUEST FOR COMPLIANCE  
INFORMATION - MINISTERIAL STATEMENT 839: TROPICANA GOLD PROJECT**

Thankyou for your letter dated 28 May 2014 regarding the above.

Following a review of the information provided in your correspondence, the Office of the Environmental Protection Authority (OEPA) considers that AngloGold Australia Limited is compliant with Ministerial Statement 839. As such, the status of the following conditions has been updated to reflect this determination:

839:M6.1 Threatened Species  
839:M6.2 Threatened Species  
839:M8.1 Groundwater and Surface Water Quality  
839:M8.2 Groundwater and Surface Water Quality  
839:M8.3 Groundwater and Surface Water Quality

If you have any questions regarding this correspondence, please contact Hugh Lance on 6145 0846.

Yours sincerely

**Ian Munro**  
MANAGER, COMPLIANCE BRANCH

### **Appendix 3: Ground Zero borrow pit rehabilitation plan**

## REHABILITATION PROPOSAL & SPECIFICATION GROUND ZERO BORROW PITS

**To:** Earthworks Contractor/s  
**CC:** Duncan Gibbs; Belinda Bastow  
**From:** Paul McNeil  
**Date:** 9<sup>th</sup> January 2014  
**Subject:** DRAFT Rehabilitation Proposal for Ground Zero Borrow Pit Area

This proposal and specification has been prepared to assist quotation and the completion of rehabilitation work for the ground zero borrow pits located on M39/980.

### Background

The ground zero borrow pits occur on either side of the road to the TGM village. Gravel resources have been substantially depleted other than a small pocket at its southern extent. For clarity, the area shown in Figure 1 has been divided into three zones:

- Northern side of the road to the village (approx. 2.36 ha);
- Southern side of the road to the village (approx. 8.18 ha); and
- The area of insitu borrow material at the southern tip of the ground zero borrow pits which is not to be rehabilitated.

### Timing

An opportunity exists to conduct rehabilitation in the near future using either equipment being floated to site for a borefield drilling program or as an independent project ahead of the official TGM opening in March 2014.

# REHABILITATION PROPOSAL & SPECIFICATION GROUND ZERO BORROW PITS

ONE

INDEPENDENCE GROUP NL

## Resources

The resources required to complete the rehabilitation described in this proposal are listed in Table 1.

**Table 1: Resource Requirements for Ground Zero Borrow Pit Rehabilitation**

| Resource  | Supplier |
|---|----------|
| D6 or similar bulldozer   |          |
| D10 dozer or equivalent for ripping (assuming the D6 can't rip deep enough) | Macmahon |
| Loader  |          |
| Grader (or Loader) with a multi tyne  |          |
| Tipper  |          |

## Health and Safety Considerations

The area is not remote from site but does contain several hazards which will need to be managed to ensure the safety of personnel. Table 2 provides a list of potential hazards which may be encountered. Please note this list is not comprehensive and should be used in association with individual JHA forms completed prior to work.

***JHA forms will need to be completed by all personnel involved in the work tasks described within this document prior to commencing the work.***

**Table 2. Hazards Associated with Rehabilitation of Ground Zero Borrow Pits**

| Hazard  | Controls to be Implemented   | Read & Understood Proposal |
|---|--|----------------------------|
| Contact with overhead power lines                                 | Keep out of power line corridor  |                            |
|   | Adhere to electrical requirements for machinery crossing under the power line along the TSF road to access Area A  |                            |
|   | Use a spotter when required  |                            |
| Buried power (potentially feeding boom gates) and water pipelines | Have buried services marked via dig permit   |                            |
|   | Pre Work inspection of area to show equipment operators where buried services are located even if not in work area |                            |
| Traffic (TGM Access Road, Road to Village and Road to TSF)        | Establish traffic management around work area  |                            |
|   | Communicate traffic management via site notification   |                            |
| Fire  | Adherence to local government vehicle movement bans  |                            |
| Uneven ground and trip hazards                                    | Watch step when walking across work area and alighting from machinery  |                            |

NB: All personnel conducting works described in this proposal are to initial that the proposal & associated hazards & controls are understood.

## Rehabilitation Planning Considerations

Rehabilitation of the ground zero borrow pits needs to be planned to avoid affecting or compromising existing infrastructure, or future activities as discussed below:

- An existing overhead powerline occurs on the northern side of the road to the TGM village. This will need to be avoided and its 20m wide exclusion corridor maintained.
- A major water pipeline occurs on the southern side of the road to the Village.
- Subsidiary water lines such as potable and sewerage lines are present along the both sides of the road to the Village.

# REHABILITATION PROPOSAL & SPECIFICATION GROUND ZERO BORROW PITS

ONE

INDEPENDENCE GROUP NL

- A dust monitoring gauge is present to the immediate west of Area B, which requires a 4 m track to maintain access.
- An approved borrow pit expansion on M39/979 occurs along the western side of Area B. Access needs to be maintained to develop a working face for future mining of gravel.
- Area C coincides contains in situ material. It is presumed this material is still useful for gravel extraction. By not rehabilitating Area C, the potential gravel resource is still maintained, whilst preserving access to a working face for the borrow expansion area.
- A loading ramp and hardstand area is proposed to be installed in Area A, north of the village road. An area has been left (Figure 1 – green hatch area) to allow for construction of a loading ramp and hardstand for semi trailers.
- The boom gates installed on the TGM access road are not wide enough to allow Macmahon's to float heavy machinery to or from site. A heavy vehicle bypass will need to be installed on the northern side of the TGM Site Access Road (allowance of a 20 m wide corridor; Figure 1).
- Areas A and B contain piles of calcrete which will need to be dozed down to allow coverage with growth medium.
- The eastern corner of Area B has been contaminated from a saline water spill in August 2013 which will need to be removed prior to rehabilitation (see Figure 1).

# REHABILITATION PROPOSAL & SPECIFICATION GROUND ZERO BORROW PITS

ONE

INDEPENDENCE GROUP NL

## Preparation

- Any rubbish or waste materials need to be removed before rehabilitation commences.
- Whilst there is a small natural upstream catchment above the borrow pit, the catchment has a low gradient and short run which is unlikely to require active drainage measures.
- Establish a 0.5 m windrow on the borrow pit side of the 20 m powerline corridor (indicative location shown by purple line of Figure 2) and on the edge of the access road to the loading ramp and hardstand area (edge of the green area in figure 2)

## Rehabilitation

- The entire area is to be deep ripped to at least 1 m, preferably 2m depth (pre-growth medium). Surface is shown in Figure 3.
- Ripping should be spaced 1.5 m apart.
- A low lying depression towards the southern end of the area needs to be filled to be free draining (labelled 2 in Figure 2 and shown in Figure 4). Piles of calcrete and mixed calcrete/growth medium can be used as fill (labelled 1 in Figure 2 and shown in Figures 5 and 6).
- The northern wall of the borrow pit needs re-working/filling to construct a 15 degree slope from crest to toe. Material stockpiled from within the truck laydown area can be used to create the 15 degree slope.
- Calcrete not used for filling needs to be re worked / pushed across the floor of the area so it can be covered with growth medium.
- All surfaces are to be covered with 0.3 m of growth medium.
- Stockpiled/windrowed vegetation shall be used to create fauna habitat mounds across the rehabilitation.
- The habitat mound should be partly covered with growth medium (ie dump several loader buckets of growth medium on the mound to create niches and seed traps). Input from Sustainability will be required at the time of construction of habitat mounds.
- Area A can then be scarified or lightly ripped to 0.3 m depth in a spiral shape of the borrow pit. Scarifying must not bring up calcrete to the surface.

## Post Rehabilitation

- Create a 15 m wide access road into the proposed loading ramp and flatten the floor of the area to establish a hardstand area.
- Sustainability will arrange broadcasting of seed once the earthworks have been complete.

For earthworks quantification purposes, the activities for Area A are summarised in Table 3 below.

Area B - Rehabilitation Works

Figure 7. Area B South of the Road to the TGM Village

Preparation

- Any rubbish or waste materials need to be removed before rehabilitation commences.
- The northern end of the borrow pit receives substantial runoff from the infrastructure corridor, causing substantial erosion and sedimentation in the northern tip of Area B (Labelled 4 in Figure 7 and shown in Figure 8). Dedicated drainage is required to either disperse water on the upstream side of a sand dune north of Area B, guide water down the infrastructure corridor to bypass Area B, or use the northern tip of

# REHABILITATION PROPOSAL & SPECIFICATION GROUND ZERO BORROW PITS

the borrow pit as a compensating basin (although the latter option would involve inundating rehabilitation for periods of high rainfall input, affecting the vegetation which could develop, this option must be discussed with the Sustainability department if to be used to ensure the best outcome is achieved).

- Salt contaminated material at the eastern corner of Area B (0.3 ha up to 0.1 m deep; labelled 3 in Figure 7 and shown in Figure 9) needs to be excavated and removed to either the TSF or used in road works.
- To enable a heavy vehicle bypass of the boom gate, a 20 m wide corridor, 50 m north and up to 200 m south of the boom gate shall be left open (pink area in Figure 7 and shown in Figure 10).
- A 1 m bund/drain needs to be installed along the northern face of Area B, to guide natural runoff to the west and away from the borrow pit.

## Rehabilitation

- The floor and recontoured slopes area is to be ripped to at least 1 m, preferably 2m depth (Figure 11).
- Ripping should be spaced 1.5 m apart.
- Area B requires selective fill in several locations to achieve a flat surface which is free draining (labelled 2 in Figure 7 and shown in Figures 12 to 14).
- The side walls of the borrow pit shall be re-worked or may require filling to construct a 15 degree slope from crest to toe. These occur on the eastern, northern and western sides of Area B (Figures 15 and 16).
- A small pile of calcrete needs to be dozed down to allow for it to be covered (labelled 1 in Figure 7 and shown in Figure 17).
- All surfaces are to be covered with at least 0.3 m of growth medium.
- Stockpiled/windrowed vegetation shall be used to create eight habitat mounds across area B.
- The habitat mounds should be partly covered with growth medium (ie dump several loader buckets of growth medium on the mound to create niches and seed traps). Input from Sustainability will be required at the time of construction of habitat mounds.
- Area B can then be scarified or lightly ripped to 0.3 m depth on contour (eg the batter walls) or in a spiral shape for the flat areas of the borrow pit. Scarifying must not bring up calcrete to the surface.

## Post Rehabilitation

- A 4 m track needs to be installed to access the dust gauge to the west of Area B (Black line in Figure 7). This can be achieved by linking with an existing exploration track, but will require part of the 15 degree battered slope to have the track crossing it. This access track is to be established from the heavy vehicle bypass, and allow access to the remaining insitu material in Area C. All vegetation remaining around the edge of the borrow pit and between the borrow pit and the access road is to be retained. Penalties will be imposed for any remnant trees removed.
- Sustainability will arrange broadcasting of seed once the earthworks have been complete.
- A 0.5 m bund adjacent to the heavy vehicle bypass and the edge of Area C.

### Growth Medium Balance Check

Whilst growth medium can be sourced for Area A from stockpiles to the Northeast and a large stockpile within the proposed hardstand/loading ramp area, Area B is more isolated from major growth medium resources. TGM Survey has picked up growth medium stockpiles within Area B (Figure 18, Table 5). The volume present is 26,812m<sup>3</sup> which indicates a small surplus, with the following qualifications:

- there is no survey data for the base of the stockpiles (so the base level has been assumed);
- the windrows around the edge of the borrow pit do not appear to have been picked up, providing additional upside to the materials balance;
- assumed that all stockpiles present are/can be used as growth medium.

Table 5. Surveyed Growth Medium Stockpiles at Ground Zero Area B

## Appendix 4: Groundwater monitoring results

## MEMORANDUM

**Date:** 28<sup>th</sup> November 2014

**To:** Sustainability Department

**From:** Melissa Bolton

**Subject:** Groundwater Monitoring Results and Internal Audit against Australian Water Quality Guidelines

### Australian Water Quality Guidelines

An internal review/audit of the *Australian and New Zealand Environment Guidelines for Fresh and Marine Water Quality* (the Guidelines), specifically Tables 3.4.1 and Table 3.4.2, against results obtained from the Tropicana Gold Mine (TGM) environmental groundwater monitoring bores was undertaken. The review included the compilation of baseline monitoring data collected since the Environmental Monitoring Bores (ENVMB001 to ENVMB008) were installed. Monitoring data has been collected monthly since October 2013 until present (November 2014), with two exceptions during the reporting period (December and August). Current licence conditions require these bores to be monitored quarterly; however monthly monitoring has been implemented to provide a reasonable baseline dataset.

A review of the baseline data against the Guidelines trigger values for a slightly to moderately disturbed ecosystem (95% protection level) found that the Tropicana baseline data naturally exceeds a number of the Guidelines trigger values and/or the Guidelines trigger values are too low to be detected by the NATA accredited laboratory TGM uses for water analysis. For example Aluminium has been consistently recorded across the environmental monitoring bores by the laboratory as <0.1 milligrams per litre (mg/L), while the guideline value is 0.055 mg/L. Additionally the trigger value for zinc is 0.14 mg/L, however the baseline value for zinc within the monitoring bores has been recorded at 0.14 mg/L. Furthermore, the Guidelines were developed specifically for fresh and marine waters. The groundwater surrounding the TGM does not align with either fresh or marine waters, with Tropicana water quality ranging from saline to hypersaline (TDS ranging from 9,000 mg/L to 42,000 mg/L).

The intent of the Guidelines is to specify biological, water and sediment quality guidelines for protecting a range of aquatic ecosystems from fresh water to marine. The Guidelines state that they are not sufficient in themselves to protect ecosystem integrity; and that they must be used in the context of the local environmental condition and other important environmental factors. The guidelines should be applied to maintain ecosystems and protect from degradation. In accordance with the Guidelines, site specific baselines values are being established for Tropicana from the

| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |                                    |                  |               |
|---|------------------------------------|------------------|---------------|
| Document Name                                     | TGM Groundwater Monitoring results |                  | 1 of 20       |
| Author  | Mel Bolton                         | Last Approved By | Emma Bamforth |
| Issue Date  | 28/11/2014                         | Next Review Date |               |

ground water monitoring undertaken to date, and site specific triggers will be developed to enable water quality changes to be identified. Triggers will be developed for each parameter to allow a 10% variation in baseline ground water quality monitoring, as per the TGM Environmental Monitoring Strategy and the Guidelines. Therefore, although the triggers presented in the Guidelines are not considered relevant for TGM, the intent of the Guidelines has been adopted and implemented on site.

To date, baseline data has been collected from the environmental monitoring bores in order to establish appropriate triggers, so a comparison against the triggers has not yet been undertaken. However following the establishment of baseline and trigger values for each parameter, an analysis against trigger values will be undertaken. It is anticipated the data presented within the 2015 CAR, will include an analysis against trigger values.

**Audit of groundwater monitoring results**

Although the Environmental Monitoring Bores have been operational for a short period of time, there is historical groundwater quality data collected prior to the commencement of operations from bores in the region (underlying the deposit and tailings storage facility) between 2007 and 2013. A comparison has been undertaken against the historical ranges of these bores in the region against the current ranges observed within the environmental monitoring bores. This information is presented in **Table 1** below. The ranges recorded for the within the Environmental Monitoring Bores during the reporting period is within the historical ranges for nearby production bores for the following parameters:

- pH
- carbonate
- hydroxide
- chloride
- sulphate
- sodium
- calcium
- cadmium
- copper
- manganese
- iron
- lead
- nickel
- boron
- cobalt
- chromium

|   |                                    |                  |               |
|---|------------------------------------|------------------|---------------|
| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |                                    |                  |               |
| Document Name                                     | TGM Groundwater Monitoring results |                  | 2 of 20       |
| Author  | Mel Bolton                         | Last Approved By | Emma Bamforth |
| Issue Date  | 28/11/2014                         | Next Review Date |               |

- zinc
- arsenic

A lower minimum was recorded within the environmental monitoring bores during the reporting period (compared with the historical ranges) for the following parameters:

- EC
- Total Dissolved Solids
- Potassium
- Magnesium

There were two cases of ranges recorded within the environmental monitoring bores during the reporting period which were above the historical ranges recorded within the nearby production bores for bicarbonate and nitrate. This data is not considered an exceedances at this point in time. Baseline values to be developed for the Project will take into consideration the nearby production bore historical groundwater quality results, and also the groundwater quality data collected within the Environmental Monitoring Bores within the first year of operation to ensure a sound baseline data set.

**Table 1: Comparison of groundwater quality data between historical pre-operational bores and current environmental monitoring bores**

| Parameter                       | Unit     | Historical Range (Pre-Operational Groundwater Data 2007 to 2013) | Current Range (Enviro Bores 2013 to 2014) | Comment  |
|---------------------------------|----------|--|---|--|
| EC                              | (µS/cm)  | 8,700 to 100,000   | 5,600 to 49,700                           | Current range does not exceed historical range, however there is a lower minimum in the current range. |
| pH                              | pH units | 4.55 to 8.8  | 6.5 to 8                                  | Current range within historical range  |
| Total Dissolved Solids          | mg/L     | 6,000 to 71,000  | 3,270 to 41,100                           | Current range does not exceed historical range, however there is a lower minimum in the current range. |

### Groundwater Monitoring Bores

During the reporting period (1 October 2013 to 30 September 2014), the eight Environmental Monitoring Bores were monitoring monthly. Environmental Monitoring Bores (ENVMB) 1 to 4 were monitored monthly with the exception of December 2013 (Total Dissolved Solids was analysed only) and August 2014. Monitoring of ENVMB5 to ENVMB8 commenced in December 2013 following installation, with data collected monthly throughout the monitoring period. A map of the monitoring locations is provided in Figure 1.

**Figure 1: Environmental Groundwater Monitoring Bores Location**

**Water Quality results**

An analysis of water quality data indicates no significant change to water quality throughout the reporting period, with steady pH, TDS and EC results recorded. Total cyanide levels have remained static throughout the reporting period with only one outlier (ENVMB002).

|   |                                    |                  |               |
|---|------------------------------------|------------------|---------------|
| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |                                    |                  |               |
| Document Name                                     | TGM Groundwater Monitoring results |                  | 6 of 20       |
| Author  | Mel Bolton                         | Last Approved By | Emma Bamforth |
| Issue Date  | 28/11/2014                         | Next Review Date |               |

pH ranged between 6.6 (ENVMB004) and 8 (ENVMB004) for the reporting period (1 October 2013 to 30 September 2014) (**Figure 2**). Salinity ranged between 3270 mg/L TDS (ENVMB004) recorded in July 2014 and 41,100 mg/L TDS (ENVMB001) recorded in December 2013 (**Figure 3**). Electrical Conductivity (EC) ranged from 5600 (ENVMB004) recorded in May 2014 to 49,700 (ENVMB002) recorded in September 2014 (**Figure 4**). Total cyanide ranged from <0.004 mg/L (recorded in all bores) throughout the year to 0.023 mg/L recorded in ENVMB002 in February 2014 (**Figure 5**). This result is an outlier in the dataset, with the remaining results consistently <0.004 mg/L. The Total Cyanide levels recorded across the ENVMBs are largely less than the trigger value (0.007 mg/L) within the Guidelines for Fresh and Marine Water Quality, with the exception of the outliers recorded in ENVMB002). The total cyanide levels recorded are less than the Weak Acid Dissociable (WAD) levels permitted under the Prescribed Premises License of 0.5 mg/L.

**Water Levels**

The groundwater levels within environmental monitoring bores ENVMB04 to ENVMB08 recorded no significant change (<0.3 m change) during the reporting period. All bores recorded a slight increase in groundwater levels except for ENVMB08 (which recorded a 0.33 m decrease in water level).

Environmental Monitoring Bores (ENVMB 01 to ENVMB 03) recorded an increase in water levels. ENVMB01 recorded the greatest increase in water level (4.27 m). ENVMB02 and ENBMB03 recorded an increase in water levels of 0.95 m and 1.08 m respectively (**Figure 6**).

## **Appendix 5: Surface Water monitoring results**

## MEMORANDUM

**Date:** 28<sup>th</sup> November 2014  
**To:** Sustainability Department  
**From:** Melissa Bolton  
**Subject:** Surface Water Monitoring Results

Surface water sampling locations have been established in and around the operational area, however no permanent surface water sites occur in or around the operational area and therefore samples are only able to be collected following rainfall events. All sample locations are visited after each rainfall event, however surface water is not always present and therefore no samples are able to be taken. Also, additional surface water sample locations have been established progressively as the project has transitioned from construction to operational phases and some sample points discussed in this memo were only established and monitoring commenced during early 2014.

Surface water quality monitoring is undertaken in accordance with the Tropicana Gold Mine Environmental Monitoring Strategy, with samples collected following rain events of over 20 millimetres (mm) in 24 hours or when surface water is observed in collection ponds. Event sampling was undertaken during the reporting period following rainfall events in November 2013, December 2013, January 2014, February 2014 and April 2014. The following sampling locations have been established:

- Downstream drain;
- Downstream LWE1;
- ROM drain;
- ROM sump;
- TSF North east;
- TSF North west;
- TSF South west;
- TSF South East: and
- Upstream Drain.

The location of these sampling sites is shown on Figure 1.

Figure 1: Surface Water Sample Locations

**Results**

Results obtained from surface water sampling conducted during the reporting period are provided in Appendix 1 and discussed briefly below. Please note that no results indicate no sample was able to be taken due to absence of surface water being present.

pH of samples collected across the surface water sampling locations ranged between 6.1 and 9 pH units with levels typically falling within the 7-8 range (**Figure 2**) .

Total Dissolved Solids (TDS) recorded across the surface water sampling locations typically ranged from 70 to 1100 mg/L and EC values typically ranges from 240 to 1860  $\mu$ S/cm (**Figure 3** and **Figure 4**). One exception where higher EC and TDS was recorded is the drain downstream of LWE1 with TDS ranging between 3920 and 5850 mg/L and EC ranging from 6310 and 8250  $\mu$ S/cm. This is likely to be due to the use of hypersaline water on the haul roads in the area. The surface water sampling is expected to have picked up salts contained in the LWE 1 drain resulting in these higher readings. This drain was constructed specifically to contain water running off the landform. These results indicate the importance of the toe drains at the base of landforms and that the drain is working effectively to contain sediment laden water.

Total cyanide (mg/L) recorded in the surface water sampling locations was largely below the detectable limits (<0.04) and/or below the trigger value (0.07 mg/L) within the *Australian and New Zealand Guidelines for Fresh and Marine Water Quality*. One outlier was recorded at the TSF Southeast sampling location of 0.02 mg/L (**Figure 5**). This result is not unexpected from this location. This surface water is contained in the Project area, and does not flow off site. All cyanide values recorded were below the trigger value identified within the Sites Prescribed Premises Licence of 0.5 mg/L.

## 1 OVERVIEW

The Threatened Species and Communities Management Strategy (TS&CMS) contained within this document provides the framework for managing threatened species and communities located within the Tropicana Gold Project (the Project) disturbance area. The TS&CMS forms part of the Project's Integrated Management System (referred to as ONE MS) that ensures the effective management of all health, safety, environment, community and operational issues associated with the Project.

ONE MS (including the TS&CMS) establishes the framework and standards that must be achieved for all activities associated with the Project. It includes the development and management of policies, management strategies, procedures and reporting requirements (Figure 1). The ONE MS is designed to align with the principle of ISO14001 – Plan, Do, Check, Act.

**Figure 1 Tropicana Gold Project Management System Framework 'ONE'**

As part of the development of the ONE MS, Tropicana Gold Mine (TGM) has established two key registers, the site legal and other obligation register (managed via CMO Compliance Database) and aspects / impacts register that documents the environmental potential impacts associated with operation. To ensure compliance and a consolidated approach to aspect/impact/hazard/risk management the site has identified 25 key environmental factors. These form the basis around which the environmental component of the ONE MS has been developed, including documentation, training and audits and inspections. The TGM environmental management strategies, of which the TS&CMS is one, identify how these environmental factors will be managed

This document has been compiled (September 2009) and revised (March 2014) with the assistance of 360 Environmental.

## 2 PURPOSE

The purpose of this document is to identify the threatened species and communities that may be impacted by the Project and to establish mitigation and management measures to minimise potential impacts. Many of the potential threats posed to threatened species and communities by the Project are relevant to the design, construction, commissioning and operational phases of the Project (e.g. vehicle movement [road kill and off-ride driving]), therefore this strategy has not been divided into these phases but rather, presents life of mine management for threatened species and communities. In this document ‘threatened’ refers to:

- species or communities that are specifically protected under State or Federal legislation (the State *Wildlife Conservation Act 1950* or the Federal *Environment Protection and Biodiversity Conservation Act 1999* respectively);
- species or communities recognised under the Department of Parks and Wildlife (DPaW, previously the Department of Environment and Conservation) Priority Ranking; and,
- other species that are new to science, previously undescribed, at the periphery of their known distribution, have limited distribution within the Project’s disturbance area or have been identified as a range extension during surveys commissioned for the Project.

Specifically, this strategy:

- identifies and describes threatened flora and fauna species that have been confirmed to occur within the Project footprint or surrounding area;
- identifies and describes threatened fauna species that have suitable habitat in the Project footprint or its surrounds, but have not been confirmed as present to date;
- identifies threatened vegetation communities that occur within the Project footprint or in its surrounds;
- identifies the risks associated with the construction and operation of the Project to the threatened species and communities; and
- proposes mitigation and management techniques to minimise the impact of the Project on threatened species and communities.

This strategy aligns with the following standards contained in the AngloGold Ashanti Australia Integrated Management System:

- Biodiversity Standard; and
- Land Management Standard.

## 3 SCOPE AND REVIEW PROTOCOLS

This TS&CMS is applicable to all activities (current and future changes) associated with the Project and associated activities that occur on the tenements under the management of the Tropicana General Manager such as Exploration activities occurring within the Mining Lease.

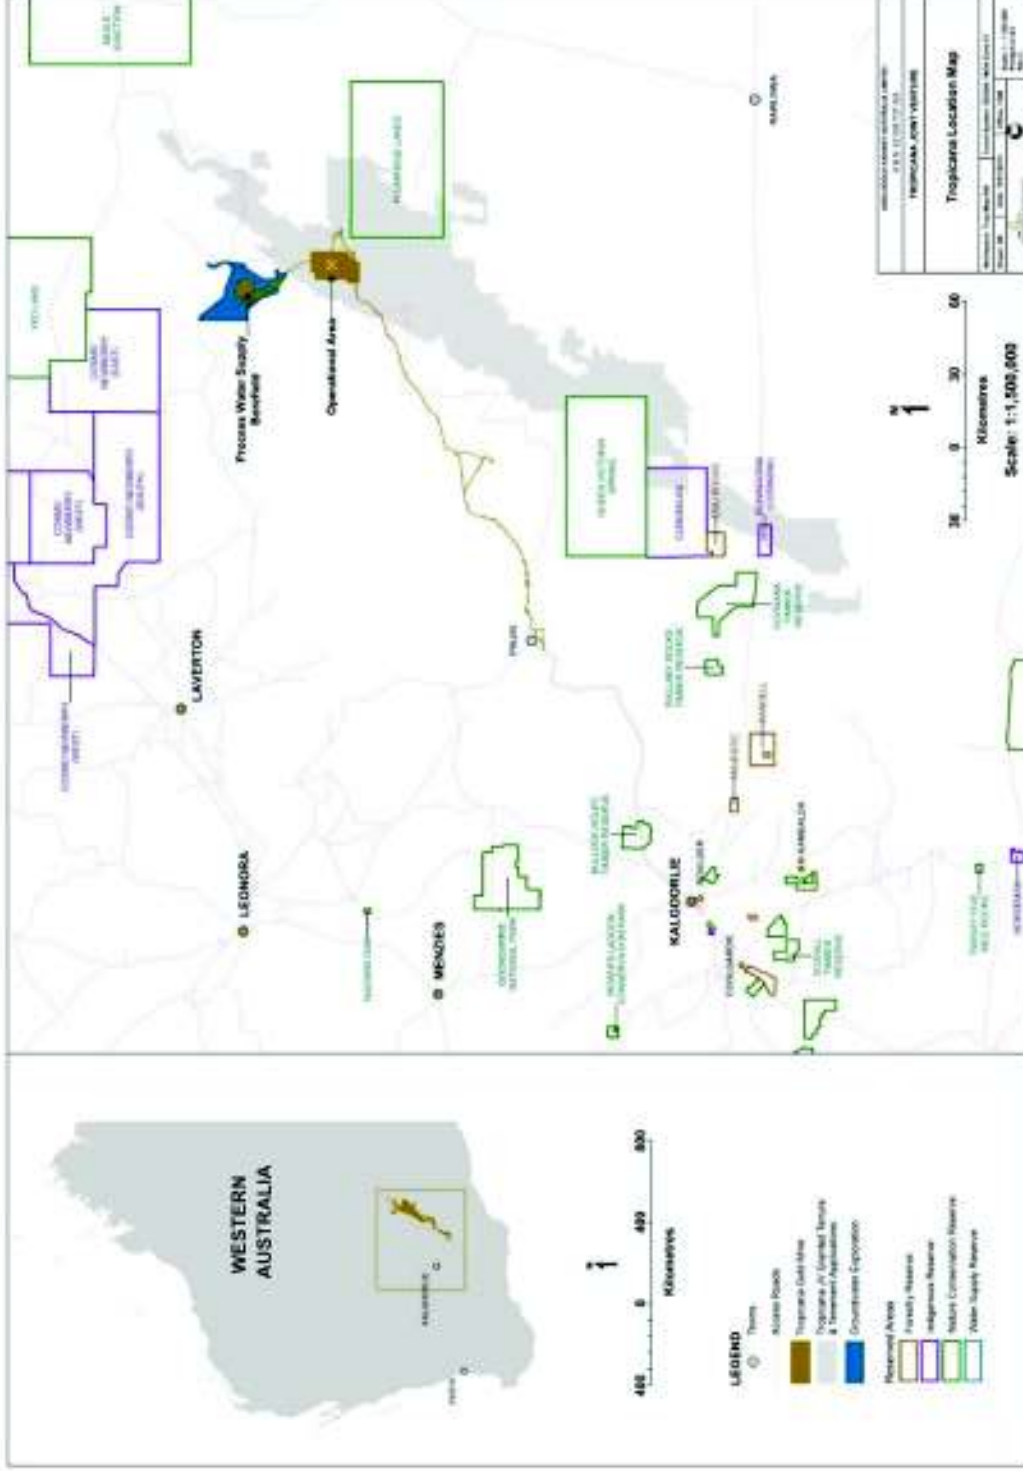

It is the intension that all future proposal or significant changes to the Project are implemented in accordance with the requirements of this strategy.

This strategy does not however cover regional exploration activities (occurring outside TGM managed land) which are managed via the ISO14001 certified AngloGold Ashanti Australia Exploration Integrated Management System.

This document will be audited annually as required by the Compliance Assessment Plan (CAP) and will undergo a management review tri-annually.

## 4 BACKGROUND

The Joint Venture (TJV) has commissioned flora, vegetation, fauna and fauna habitat surveys and desktop assessments covering all proposed disturbance areas of the Project in order to establish the presence and distribution of threatened species and communities, and likely impacts. A list of the surveys completed to date is provided in Table 1.

In addition, consultation has been undertaken with members of the DPaW Science Division, the Western Australia Museum and other relevant experts and institutions to confirm the adequacy of the investigations. All threatened species and communities (as defined broadly above) deemed to potentially occur in the Project footprint, are discussed within this management strategy.

## 5 LEGAL REQUIREMENTS AND OTHER CONSIDERATIONS

There are several acts, regulations and other requirements that should be considered in the protection of environmental assets such as threatened fauna, flora and communities. The most significant documents are summarised below.

### 5.1 LEGISLATION

#### ***Wildlife Conservation Act 1950 (WA)***

The *Wildlife Conservation Act 1950 (WC Act)* was developed to provide for the conservation and protection of wildlife in Western Australia. Under Section 14 of the Act, all native fauna and flora within Western Australia are protected. However, the Minister may, via a notice published in the Government Gazette, declare a list of taxa that are in need of special protection. The current listing was gazetted on 5 August 2008 (Government of Western Australia 2008).

Under the WC Act flora listed as Declared Rare Flora (DRF) are afforded specific protection as threatened species. The WC Act allows for the special protection of rare and threatened native fauna species. Currently in Western Australia, rare or threatened fauna species are defined under the WC Act according to the following schedules:

| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |  |                  |               |
|---|--|------------------|---------------|
| Document Name                                     | Threatened Species and Communities Management Strategy |                  | 8 of 47       |
| Author  | 360 Environment / B Bastow                             | Last Approved By | B Bastow      |
| Issue Date  | 16 December 2014                                       | Next Review Date | December 2016 |

- Schedule 1: A native species that is rare or likely to become extinct, is declared to be fauna that is in need of special protection;
- Schedule 2: A native species that is presumed to be extinct, is declared to be fauna that is in need of special protection;
- Schedule 3: Birds that are subject to an agreement between the governments of Australia and Japan relating to the protection of migratory birds and birds in danger of extinction, are declared to be fauna that is in need of special protection; and,
- Schedule 4: A native species that is in need of special protection, otherwise than for the reasons specified in Schedules 1, 2 and 3.

Ecological communities in Western Australia are also ranked by DPaW and can be listed as ‘Threatened Ecological Communities’ once they have been defined by the Western Australian Threatened Ecological Communities Scientific Advisory Committee and are then endorsed by the Minister for Environment. Threatened Ecological Communities are listed under four categories; Presumed Totally Destroyed, Critically Endangered, Endangered or Vulnerable (Department of Environment and Conservation 2008d). Environmental Protection and Biodiversity Conservation Act 1950 (Commonwealth).

At the Federal level, the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) is relevant to the Project because the Act:

- protects the environment, particularly matters of ‘national environmental significance’ (NES) which include threatened species, such as the Southern Marsupial Mole and Crested-tailed Mulgara, and Threatened ecological communities; and,
- ensures Australia’s environmental compliance with international treaties that Australia is party to e.g. Japan and Australia Migratory Bird Agreement, China and Australia Migratory Bird Agreement and Republic of Korea and Australia Migratory Bird Agreement.

**5.2 OTHER REQUIREMENTS AND CONSIDERATIONS**

***Department of Parks and Wildlife Priority List***

If a species does not meet the criteria for listing as Threatened Fauna or Declared Rare Flora under the WC Act (e.g. due to lack of information) and is poorly known and/or conservation dependent, it may be classified as a Priority Species at the discretion of the DPaW. Priority Fauna are placed into one of five categories and Priority Flora are placed into one of four categories (see Appendices 1 and 2). The DPaW also recognises Priority Ecological Communities (PECs) for which there is insufficient knowledge to warrant Threatened Ecological Community status, but for which there is some conservation concern. Priority species are not provided any extra legislative protection over other native species in Western Australia. The listing of a species or a community as a Priority indicates that activities that may impact them are in need of special consideration.

***International Union for Conservation of Nature – Red List of Threatened Species***

The International Union for Conservation of Nature Red List of Threatened Species provides taxonomic, conservation status and distributional information for taxa that have been globally evaluated using the Red List Categories and Criteria (<http://www.iucnredlist.org/> Accessed 21/03/2014). This system is designed to determine the relative risk of extinction. The main purpose of the Red List is to catalogue and highlight those taxa that are facing a higher risk of global extinction (i.e. those listed as Critically Endangered, Endangered and Vulnerable). The Red List also includes information on taxa that are categorised as Extinct or Extinct in the Wild; on taxa that cannot be evaluated because of insufficient information (i.e. are Data Deficient); and on taxa that are either close to meeting the threatened

|---|---|-------------------------|----------------------|
| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |   |                         |                      |
| <b>Document Name</b>                              | <b>Threatened Species and Communities Management Strategy</b> |                         | 9 of 47              |
| <b>Author</b>                                     | <b>360 Environment / B Bastow</b>                             | <b>Last Approved By</b> | <b>B Bastow</b>      |
| <b>Issue Date</b>                                 | <b>16 December 2014</b>                                       | <b>Next Review Date</b> | <b>December 2016</b> |

thresholds or that would be threatened were it not for an ongoing taxon-specific conservation programme (i.e. are Near Threatened).

***EPA Position Statement 3: Terrestrial Biological Surveys as an Element of Biodiversity Protection***

The Environmental Protection Authority (EPA) regards biological diversity as a key environmental factor and has an objective to ensure that biodiversity is protected. Position Statement 3 discusses the principles which the EPA will use when assessing proposals which may impact on biodiversity values.

***International Council on Mining and Metals Sustainable Development Principle***

The International Council on Mining & Metals (ICMM) is an industry group that addresses key priorities and emerging issues within the sector. The ICMM has implemented 10 principles to measure their performance relating to sustainable development in the mining and minerals. Of importance:

Principle 7: Contribute to conservation of biodiversity and integrated approaches to land use planning:

- respect legally designated protected areas;
- disseminate scientific data on and promote practices and experiences in biodiversity assessment and management; and,
- support the development and implementation of scientifically sound, inclusive and transparent procedures for integrated approaches to land use planning, biodiversity, conservation and mining.

***Other Considerations***

Other species that are new to science, or previously undescribed, or at the periphery of their known distribution, or have been identified as a range extension during the Joint Venture’s surveys have been taken into consideration.

Consultation with the DPaW Science Division, the Western Australian Museum and other experts was also undertaken to confirm that all relevant species were considered in the surveys and in this TS&CMP.

**6 REGIONAL SETTLING**

The main disturbance area of the Project is the Operational Area, located within the Great Victoria Desert, as defined by the Interim Biogeographic Regionalisation of Australia (IBRA version 7). IBRA divides the Australian continent into 89 bioregions and 419 sub-regions for assessing the status of native ecosystems, their protection in the national reserve system and for use in the monitoring and evaluation framework in the Australian Government’s current Natural Resource Management initiatives (Department of the Environment 2014).

The regional setting of the Project is:

- the Operational Area and the Minigwal Trough Water Supply Area are located in the southwest corner of the Great Victoria Desert (GVD) IBRA bioregion;
- the Pinjin Infrastructure Corridor spans the Murchison and GVD bioregions; and,
- the Cable Haul Infrastructure Corridor spans the Nullarbor and GVD bioregions.

## 7 FLORA OF CONSERVATION CONCERN

A number of threatened flora species protected under State and Federal legislation, or otherwise of conservation concern to the Joint Venture have the potential to occur in and around the disturbance areas of the Project. Searches of the DPaW Declared Rare and Priority Flora Database, the Western Australia Herbarium database, the EPBC Protected Matters database, various reference books and consultation with experts were undertaken to identify species of conservation concern potentially occurring in and around the Project footprint. A number of taxa identified in the original PER have changed status or are no longer listed. A summary of these changes is provided in Table 2

Several field surveys were carried out across the Project footprint; these surveys ranged from Level 1 and Level 2 surveys (EPA 2004a) to targeted surveys for threatened species (Table 1). A summary of the current flora species of conservation concern to the Project including the results of surveys undertaken by specialist consultants is provided in Table 3. This list is accurate at the time of writing, however further survey and taxonomic work may alter the list in the future.

**Table 2 Changes in conservation status**

| Species  | Previous Status | Current Status |
|--|-----------------|----------------|
| <i>Conospermum toddii</i>                                    | DRF/EN          | P4             |

## 8 FAUNA OF CONSERVATION CONCERN

Desktop searches of available literature, the DPaW Threatened and Priority Species Database, the EPBC Protected Matters Database and consultation with various experts identified 28 current conservation significant fauna species potentially present in and around the Project disturbance area (including some species presumed to be extinct in the local area). Table 1 summarises the desktop searches and the field surveys undertaken to date with regards to vertebrate fauna protected under State or Federal legislation, or otherwise considered to be of conservation interest to the Joint Venture. Field surveys recorded evidence of six of these species in the Project footprint (Table 5). This total does not include a species of Stick-nest Rat (*Leporillus* sp. – presumed locally extinct) which formerly occurred in the area, based on the presence of old, abandoned nests in breakaways.

This list is accurate at the time of writing, however, further survey and taxonomic work may alter the list in the future (e.g. the taxonomy and range of *Dasycercus* sp. is currently uncertain). A number of species identified in the original PER have changed status or are no longer listed. A summary of these changes is provided in Table 4

The breeding season for the conservation significant fauna species has been identified to assist in minimising the potential disruption and disturbance to these species from the construction and operation of the Project (Table 6). Where possible, activities that are potentially detrimental to a species breeding should be scheduled to avoid critical breeding periods and/or preferred habitat.

**Table 4 Changes in conservation status**

| Species   | Previous Status | Current Status |
|---|-----------------|----------------|
| Grey Falcon - <i>Falco hypoleucos</i>                                   | P4              | S1             |
| Night Parrot - <i>Pezoporus occidentalis</i>                            | VU              | EN             |
| Slender-billed Thornbill (western) - <i>Acanthiza iredalei iredalei</i> | S1/VU           | Delisted       |
| Woma Python - <i>Aspidites ramsayi</i>                                  | P1              | S4             |
| *South-Western Carpet Python – <i>Morelia spilota imbricata</i>         | S4              | S4             |

\*only recently identified as potentially occurring

**Threatened Species and Communities Management Strategy**

**Table 5 Threatened Fauna Potentially Occurring In and Around the Project Footprint**

| Species   | Operational Area | Pinjin Corridor | Cable Haul Corridor | Water Supply Area | WA Status | Federal Status | IUCN Status | Recorded:     |  | Habitat Notes:  |
|---|------------------|-----------------|---------------------|-------------------|-----------|----------------|-------------|---------------|--|---|
|   |                  |                 |                     |                   |           |                |             | Listed Under: |  |   |
| <b>Mammals</b>  |                  |                 |                     |                   |           |                |             |               |  |   |
| Bilby - <i>Macrotis lagotis</i>   | -                | -               | -                   | -                 | S1        | VU             | VU          |               |  | Extant populations occupy three major vegetation types; open tussock grassland on uplands and hills, Mulga woodland/shrubland growing on ridges and rises, and hummock grassland in plains and alluvial areas.  |
| Central Long-eared Bat - <i>Nyctophilus</i> sp. (previously <i>N. timoriensis</i> ) | -                | -               | -                   | -                 | P4        | -              | -           |               |  | Often found in heavy Eucalypt woodlands and tall woodlands of the Coolgardie IBRA region with a tall shrub understorey of <i>Melaleuca lanceolata</i> , <i>M. pauperiflora</i> , <i>M. quadriflora</i> , and <i>Eremophila</i> sp., <i>N. timoriensis</i> is less common in open woodlands.                           |
| *Chuditch - <i>Dasyurus geoffroyi</i>   | -                | -               | -                   | -                 | S1        | VU             | NT          |               |  | Inhabit most kinds of wooded habitat within its current range including Eucalypt forest (especially Jarrah, <i>Eucalyptus marginata</i> ), dry woodland and Mallee shrublands.  |
| Greater Stick-nest Rat - <i>Leporillus conditor</i> (locally extinct)               | ✓                | -               | -                   | -                 | S1        | VU             | VU          |               |  | Inhabits perennial shrublands, especially of succulent and semi-succulent plant species.  |
| Mulgara - Crested-tailed <i>Dasyercus cristicauda</i>                               | -                | -               | -                   | -                 | S1        | VU             | LC          |               |  | The main vegetation in inhabited areas, specifically <i>Triodia basedowii</i> , provides refuge from the heat and cover for the entrance to their burrows. Mulgara live in burrows which they dig on the flats between low sand-dunes or on the lower edges of dunes. <i>D. cristicauda</i> is assumed extinct in WA. |
| Mulgara - Brush-tailed <i>Dasyercus blythi</i>                                      | -                | -               | -                   | -                 | P4        | -              | LC          |               |  | As above. This is the more likely Mulgara to be present in the Project footprint – <i>D. cristicauda</i> is assumed extinct in WA.  |
| *Numbat - Walpurti <i>Myrmecobius fasciatus</i>                                     | -                | -               | -                   | -                 | S1        | VU             | EN          |               |  | The remaining populations of the Numbat are found in Eucalypt forests and woodlands dominated by <i>E. marginata</i> , <i>E. calophylla</i> and <i>E. wandoo</i> . Numbats nest in hollow logs or in burrows.   |

## Threatened Species and Communities Management Strategy

| Species   | Recorded:        |                 |                     |                   |           | Listed Under:  |             |  | Habitat Notes: |
|---|------------------|-----------------|---------------------|-------------------|-----------|----------------|-------------|--|----------------|
|   | Operational Area | Pinjin Corridor | Cable Haul Corridor | Water Supply Area | WA Status | Federal Status | IUCN Status |  |                |
| Sandhill Dunnart - <i>Sminthopsis psammophila</i>                 | -                | -               | -                   | -                 | S1        | EN             | EN          | Sandhill Dunnarts prefer sandy soils, typically low parallel sand dune habitat with a diverse understorey and a ground cover of Spinifex ( <i>Triodia</i> ). Spinifex size is variable in preferred habitat; dunnarts show a preference for large hummocks approximately 40 cm high and 70 - 100 cm diameter as nest sites. Other vegetation in preferred habitats varies but is most commonly Mallee or Marble Gum ( <i>Eucalyptus gongylocarpa</i> ), often with <i>Callitris verrucosa</i> and a complex shrub understorey. |                |
| <sup>1</sup> Southern Marsupial Mole - <i>Notoryctes typhlops</i> | ✓                | -               | ✓                   | ✓                 | S1        | EN             | DD          | SMM inhabits Spinifex dominated sand dune and sand plain country. The sand in these regions tends to be loose and free of gravels. The SMM appears to have a preference for substrate with compactness at the level of <10 drops per 150 mm to a depth of at least 450 mm when measured using a penetrometer.  |                |
| <b>Birds</b>  |                  |                 |                     |                   |           |                |             |  |                |
| <sup>2</sup> Australian Bustard - <i>Ardeotis australis</i>       | ✓                | ✓               | ✓                   | ✓                 | P4        | -              | LC          | Australian Bustards are found in tussock grassland, <i>Triodia</i> hummock grassland, grassy woodland, low shrublands. They will also use denser vegetation when recent burning has temporarily opened up these areas.   |                |
| Crested Bellbird - <i>Oreocia gutturalis</i>                      | -                | ✓               | -                   | -                 | P4        | -              | LC          | The species occurs from semi-arid coastlines to the arid Australia interior.   |                |
| Grey Falcon - <i>Falco hypoleucos</i>                             | -                | -               | -                   | -                 | S1        | -              | VU          | Usually restricted to shrubland, grassland and wooded watercourses of arid and semi-arid regions, although it is occasionally found in open woodlands near the coast. They also occur near wetlands where the surface water attracts the prey.   |                |
| Major Mitchell's Cockatoo - <i>Cacatua leadbeateri</i>            | -                | -               | -                   | -                 | S4        | -              | LC          | Inhabits a wide variety of semi-arid and arid inland habitats, provided there is fresh surface water and large hollow trees for nesting. It has been recorded in forest, woodland and shrubland, including Mulga, Mallee, <i>Acacia</i> , and <i>Callitris</i> associations.   |                |

## Threatened Species and Communities Management Strategy

| Species   | Recorded:        |                 |                     |                   |           | Listed Under:  |             |   | Habitat Notes: |
|---|------------------|-----------------|---------------------|-------------------|-----------|----------------|-------------|---|----------------|
|   | Operational Area | Pinjin Corridor | Cable Haul Corridor | Water Supply Area | WA Status | Federal Status | IUCN Status |   |                |
| <sup>3</sup> Malleefowl - <i>Leipoa ocellata</i>                          | ✓                | ✓               | ✓                   | ✓                 | S1        | VU             | VU          | Found principally in semi- arid to arid shrublands, low woodlands dominated by mallee and associated habitats such as Broombush ( <i>Melaleuca uncinata</i> ). In the GVD, Malleefowl appear to prefer the smaller desert-mulga <i>Acacia myrura</i> . Studies have shown that the birds use vegetation adjacent sand plain areas for foraging where food resources are more common. The birds also occur in denser Mallee ( <i>E. socialis</i> , <i>E. oxymitra</i> , and <i>E. gammophylla</i> ). Typically, these Mallee areas have an understory of <i>Triodia basedowii</i> or other <i>Triodia</i> species, and shrub thickets on the ridges where <i>Acacia ligulata</i> and other seed bearing shrubs are often common. |                |
| Naretha Blue Bonnet - <i>Northiella haematogaster narethae</i>            | -                | -               | -                   | -                 | S4        | -              | LC          | Usually found in or within sight of Casuarina and Acacia woodland, and usually near shrubland. They are often found far from water. The Naretha Blue Bonnet moves seasonally with the rains.  |                |
| Night Parrot - <i>Pezoporus occidentalis</i>                              | -                | -               | -                   | -                 | S1        | EN             | EN          | Most records for this species come from hummock grasslands with Spinifex ( <i>Triodia spp.</i> ) or from areas dominated by samphire. They have also been reported in low chenopod shrub lands with Saltbush and Bluebush, and from areas of Mitchell Grass ( <i>Astrelia spp.</i> ) with scattered Chenopods. Many records have come from waterholes, and interestingly, almost all reports from areas of <i>Triodia</i> have noted the presence of water nearby.  |                |
| Peregrine Falcon - <i>Falco peregrinus</i>                                | ✓                | -               | -                   | -                 | S4        | -              | LC          | The species prefers habitat with rocky ledges, cliffs, watercourses, open woodland or margins with cleared land.  |                |
| Striated Grass wren - <i>Amytornis striatus striatus</i>                  | -                | -               | -                   | -                 | P4        | -              | -           | This subspecies of Striated Grasswren inhabits Spinifex on sandhills and rocky hillslopes and may occur in the survey area. The species' presence is strongly correlated with vegetation communities that support hummock grassland ( <i>Triodia sp.</i> ).   |                |
| Thick-billed Grass-wren (western sp) - <i>Amytornis textilis textilis</i> | -                | -               | -                   | -                 | P4        | -              | -           | The Thick-billed Grasswren was found in areas of 'thick bush' or 'thickets', dense Saltbush, in 'marlock' or low Mallee scrub and in 'large clumps of bushes which had extremely dense masses of foliage.   |                |

## Threatened Species and Communities Management Strategy

| Species  | Operational Area | Pinjin Corridor | Cable Haul Corridor | Water Supply Area | WA Status | Federal Status | IUCN Status | Recorded: | Listed Under: | Habitat Notes:   |
|--|------------------|-----------------|---------------------|-------------------|-----------|----------------|-------------|-----------|---------------|--|
|  |                  |                 |                     |                   |           |                |             |           |               |  |
| <i>glareola</i>  |                  |                 |                     |                   |           |                |             |           |               | plains and plains about lower courses of larger rivers.  |
| <b>Reptiles</b>  |                  |                 |                     |                   |           |                |             |           |               |  |
| South-Western Carpet Python – <i>Morelia spilota imbricata</i>             | -                | -               | -                   | -                 | S4        | -              | -           |           |               | Habitat is varied and includes dense forests, sparse woodlands, and in vegetated rocky areas.  |
| Great Desert Skink - <i>Liopholis kintorei</i> ( <i>Egernia kintorei</i> ) | -                | -               | -                   | -                 | S1        | VU             | VU          |           |               | The species generally occurs on red sand plains and sand ridges and they generally prefer spinifex ( <i>Triodia</i> species and <i>Plectrachne</i> species), grassland sand plains and some adjacent dune field swales. Regenerating vegetation appears to be a critical habitat requirement. Skinks appear to prefer a mosaic landscape of different aged vegetation and inhabit sites that have been burnt in the previous 3-15 years. Preferred habitat has at least 50% bare ground. |
| Southern Desert <i>Lerista puncticauda</i>                                 | -                | -               | -                   | -                 | P2        | -              | -           |           |               | The Southern Desert <i>Lerista</i> prefers arid shrub-lands; sandridges vegetated with Marble Gums and <i>Triodia basedowii</i> .  |
| Woma Python - <i>Aspidites ramsayi</i>                                     | ✓                | -               | -                   | -                 | S4        | -              | EN          |           |               | The Woma Python is generally found in sandy arid habitats including desert sand hills and dunes as well in a variety of other subtropical, temperate, arid and semi-arid regions. Generally Woma Pythons are strongly associated with red desert and Spinifex.   |

\*Due to specific habitat requirements it is unlikely these species occur in the Project footprint.

1 Some evidence of mole activity was also found in the flat red plains that occur across much of the Minigwal Water Supply Area and the Cable Haul Infrastructure Corridor Survey Area.

2 Tracks were found in an area of long unburnt Eucalypt woodland with a Spinifex understorey.

3 Inactive nesting mounds were located in dense Mulga woodland in the Minigwal Water Supply Area and along the proposed Cable Haul Infrastructure Corridor Road.

## 9 PUTATIVE SHORT RANGE ENDEMIC

Some invertebrates, known broadly as Short Range Endemic species, are particularly sensitive to habitat alteration and are an increasingly important consideration as part of the Environmental Impact Assessment process. Short Range Endemics have been broadly defined as species with a natural range of less than 10,000 km<sup>2</sup> (Harvey 2002), and many species have a natural range that is considerably less, sometimes from a single locality (New and Sands 2002).

Surveys conducted in the Operational Area revealed 17 morphologically defined species considered to be putative Short Range Endemic species. Of the 17 species of conservation interest, one (*Kwonkan* sp. 2) has only been located within the proposed operational footprint. Up until recently, the operational footprint of the waste material landform was also expected to disturb the only known sampling location of *Aganippe* sp. 4. The Joint Venture has re-designed the footprint of one of the waste landforms and the sampling location of *Aganippe* sp. 4 is now approximately 800 m from the waste landform footprint. None of the species are currently listed (under State or Federal legislation, or under the DPaW Priority scheme) as protected species and their conservation significance results from the fact that all are new to science and/ or belong to genera composed predominantly of Short Range Endemic species.

## 10 SUBTERRANEAN FAUNA

Western Australian Stygofauna and Troglafauna exhibit high levels of endemism and many of these species appear to have restricted ranges, making them particularly important in the Environmental Impact Assessment process (EPA 2003). There is a significant lack of information on Stygofauna and Troglafauna within the GVD, and prior to the Joint Venture's activities there were no known data for the area surrounding the project.

No Stygofauna have been recorded in the surveys during any of the survey undertaken during the Project baseline survey process.

The survey conducted both inside and outside the proposed Operational Area recorded three Troglotic species:

- Isopod (slater);
- Diplura (dipluran); and,
- Chilopoda (centipede).

The Isopod has been located both within and outside of the footprint. Currently, the dipluran and centipede have only been located inside the disturbance footprint. Further work has been undertaken to demonstrate that the presumed habitat of the dipluran and centipede occur more widely.

## 11 ECOLOGICAL COMMUNITIES

Extensive surveys have been undertaken (Table 1) to determine the presence of Threatened Ecological Communities (TECs) and Priority Ecological Communities (PECs) in the Project footprint. Despite extensive and detailed survey and vegetation mapping, no TECs have been identified.

The importance of a community referred to as the 'Yellow sandplain communities of the Great Victorian Desert' has been noted since 1994 (Pearson 1994). The community contains a diverse array of flora and fauna including the Sandhill Dunnart. The community is characterised by highly diverse mammalian and reptile fauna and distinctive plant communities (Barton and Cowan 2001). The DPaW has nominated the 'Yellow sandplain communities of the Great Victorian Desert' as a Priority 3 (ii) ecological community. At the present time, no definitive description of the boundary of this community has been

determined by DPaW. The Operational Area is clearly outside the PEC, however the Joint Venture considers that the peripheral areas of the PEC may be intersected by the both Infrastructure Corridors, thus management of the proposed corridors to minimise impacts on flora, vegetation and fauna values will be important in maintaining biodiversity values of the PEC.

## 12 RISK ASSESSMENT

A risk assessment process has been undertaken for the proposed Project, prior to commencing the formal environmental assessment process. The risk assessment process will be ongoing through the life of the Project, and has been based on principles and methodology outlined in HB 203:2006 – Environmental Risk Management – Principles and Processes and AS/NZS 4360:2004 – Risk Management. The primary aim has been to identify potential environmental consequences (specific to the item being considered, in this case threatened flora and fauna; Table 7) to all activities, the likelihood of occurrence (Table 8) and to assign an appropriate response to reduce environmental risk.

**Table 7 Consequence Table for Assessing Impacts on Threatened Species or Communities**

| Consequence   | Example   |
|---------------|---|
| Insignificant | <ul style="list-style-type: none"> <li>The Joint Venture considers that there is no 'insignificant' impact to a threatened species precisely because they are threatened.</li> </ul>  |
| Minor         | <ul style="list-style-type: none"> <li>Temporary alteration to behavior of individuals of a conservation significant species e.g. short term avoidance of a component of pre-disturbance range.</li> </ul>  |
|               | <ul style="list-style-type: none"> <li>Temporary alteration to population dynamics (resolved within one breeding cycle) e.g. reduction in recruitment for one breeding season.</li> </ul>   |
|               | <ul style="list-style-type: none"> <li>Temporary reduction of connectivity or habitat values for threatened species e.g. connectivity is restored (with or without human intervention) within one breeding cycle of the species of interest.</li> </ul> |
| Moderate      | <ul style="list-style-type: none"> <li>Short term loss of a small number (&lt;5%) of individuals of a threatened species.</li> </ul>  |

## Threatened Species and Communities Management Strategy

### 13 THREATS AND MITIGATIONS

#### CLEARING/EARTHWORKS

**Background** The construction and operation of the Project will require the clearing of up to 3,940 ha. The most significant threat this poses is the loss of critical habitat as many of the species of conservation significance have specific habitat requirements.

#### Potential Impacts

Potential impacts resulting from the clearing of native vegetation and development of infrastructure for the Project are:

- The loss of individual conservation significant flora and fauna species.
- The loss of Short Range Endemic species i.e. *Kwonkan* sp. 2
- The loss of conservation significant vegetation communities.
- The loss and degradation of habitats essential to the survival of conservation significant fauna species.
- The direct removal of habitat of dependent subterranean species from the ore extraction process.
- Fragmentation of populations of conservation significant flora and fauna species.
- Access roads may alter local surface water flows.
- Changed fire regimes.
- Introduction of Invasive flora.
- Generation of dust.
- Salinisation of soil or vegetation death from saline water use.
- Fauna entrapment in open trenches.

#### Management Strategy

The following management measures will be implemented by the Joint Venture to prevent or mitigate impacts of land and habitat disturbance on conservation significant species and communities:

- Disturbance to native vegetation will be minimised where possible and all areas requiring clearing will be clearly delineated.
- Known locations of DRF within 50 m of the disturbance area will be visibly demarcated.
- All infrastructure (including the access roads) has/will be designed and located to avoid impacts on all known populations of Declared Rare Flora.

## Threatened Species and Communities Management Strategy

### CLEARING/EARTHWORKS

- Infrastructure areas have/will be designed and located to avoid known locations of Priority flora where reasonably practical.
- Surface water dispersion systems will be incorporated into road corridors to prevent interference with surface flow critical for vegetation survival.
- The overall layout of the Operational Area has been designed to minimise impacts to surface water flow.
- Surface water dispersion systems will be incorporated into the design of the Operational Area to minimise impacts to surface water flow.
- The location of infrastructure (e.g. alignment of Mine Access Road) will minimise the fragmentation of habitat (e.g. by avoiding bisecting areas of continuous habitat of threatened species)
- Develop and implement appropriate fire protocols to reduce the risk of fire and to ensure fire is effectively managed.
- Establish appropriate fire breaks adjacent to high fire risk areas.
- Confining clearing impacts strictly to the minimum area practical for the establishment of the mine and associated infrastructure.
- Conducting further surveys for troglobitic fauna prior to any pit extensions or amendments.
- Disturbance to critical habitats will be avoided where practicable in sand dune systems suitable for Marsupial Moles, Sandhill Dunnarts, Mulgara.
- Disturbance to possible Malleefowl and Sandhill Dunnart habitats will be minimised where practicable such as Areas of Spinifex which have been unburnt for between eight and 38 years, and have the potential to provide habitat for Sandhill Dunnarts and Mulgara.
- Known locations of critical threatened fauna habitat such as Malleefowl mounds, Bustard nests and dune systems with evidence of Marsupial Mole activity will be avoided where practicable.
- Known locations of Priority Ecological Communities (PEC) will be avoided where practicable.
- The removal of large mature "habitat" trees, particularly Marble Gum (*Eucalyptus gongylocarpa*), with hollows providing nesting sites for rare parrots will be avoided where reasonably practicable.
- Areas no longer required will be rehabilitated as soon as is practicable. Rehabilitation will include placing cleared vegetation and logs within the area to provide fauna refuge.
- Following rehabilitation, areas will be monitored and treated for invasive flora invasion, if necessary.
- Information on current listings (State or Federal legislation, or DPaW Priority ranking) will be kept up to date.

## Threatened Species and Communities Management Strategy

### CLEARING/EARTHWORKS

- Site inductions will include information about conservation significant flora, vegetation, fauna and habitat to ensure personnel are aware of the potential impacts associated with activities on these species.
- Trapped fauna within open trenches should be cleared and recorded by a suitably trained fauna-clearing person no later than three hours after sunrise. The clearing and recording shall be repeated before sunset.
- Open trench lengths shall not exceed a length capable of being inspected and cleared by the fauna-clearing person.
- Fauna refuges and/or egress ramps should be placed in the trench at intervals not exceeding 50 m
- A report on fauna management should be produced including: details of all fauna inspections; the number of fauna cleared from trenches; fauna interactions; fauna mortalities and all actions taken.

|                        | Performance Indicator   | Target   |
|------------------------|---|--|
| Performance Indicators | • State, Federal or Priority listed fauna species or communities. | <ul style="list-style-type: none"> <li>• No adverse impacts to State, Federal or Priority listed fauna species or communities outside the approved area.</li> </ul>  |

## Threatened Species and Communities Management Strategy

### EMISSIONS TO AIR/LAND/WATER

#### Background

The construction and operation of the Project will require activities such as the use and production of materials that may generate or release potentially hazardous emissions to the environment which may, in turn, impact upon a threatened species. These include:

- Putrescible waste (e.g. vegetable scraps) and associated disposal facility.
- Inert waste (e.g. solid waste that will not break down) and associated disposal facility.
- Accidental release of saline water.
- Workshops, hydrocarbon storage areas and other dangerous goods (e.g. - cyanide).
- Tailings and associated tailings storage facility.
- Waste landforms.
- Dust.

#### Potential Impacts – Environmentally Hazardous Substances

The inappropriate disposal or accidental spill/release of waste hydrocarbons and other environmentally hazardous substances can cause contamination of substrate, groundwater or surface water potentially leading to:

- Implementation of the Construction and Environmental Management Strategy (CEMS) and the Operational Environmental Management Strategy (OEMS).
- Loss of critical fauna habitat.
- Loss of threatened flora substrate.
- Poisoning of threatened fauna.
- Contamination of surface water and groundwater.

#### Management Strategy

Disturbance to the habitat of threatened species by the disposal or accidental spill of waste hydrocarbons and other environmentally hazardous substances can be prevented by:

- Avoiding critical habitat in the placement of storage, re-fuelling, handling and disposal facilities.
- In accordance with CEMS and OEMS, all pipelines with will either be buried or banded, have leak detection systems and automatic cut-off systems
- The pipeline corridor to the Minigwal Borefield will be designed to avoid areas where threatened or conservation significant species and habitats have been recorded.
- Preventing contamination of troglobitic habitats by hydrocarbon / chemical spills as per site procedures.
- Appropriate licenses for the transport, handling, storage and disposal of hazardous materials including any Dangerous Goods Licensing.
- Ensuring appropriate containment, bunding and storage facilities are present and meet the specifications of Australian Standard 1940.
- Establishing and implementing hydrocarbon storage, handling and use procedures and process.

## Threatened Species and Communities Management Strategy

### EMISSIONS TO AIR/LAND/WATER

#### Potential Impacts – Tailings

The use of cyanide in gold extraction may result in the presence of this pollutant in the tailings and water. Inappropriately managed tailings storage facilities (i.e. wall breach) may result in the release of cyanide to surface and groundwater potentially.

- Seepage of processing water through the base of the facility resulting in contaminating land and groundwater. This presents a significant risk to subterranean fauna.
- Fauna death as a result of drinking water containing cyanide.
- Entrapment in the tailings.

#### Management Strategy

The risk of impacts associated with the tailings and tailings storage facility can be managed by:

- Design infrastructure such as the tailings storage facility to ensure containment of any potentially contaminated runoff, to prevent uncontrolled discharge of tailings into the environment.
- Limit Weak Acid Dissociable Cyanide to less than 50mg/L in water sitting on the tailings storage facility.
- Compliance with the International Cyanide Management Code.
- Restricting animal access to the facility (netting / fencing).
- Implementation of the Tailings Storage Facility Management Strategy.
- Tailings storage facility will be designed and constructed to limit the potential release of seepage water through the installation of a basin liner, seepage recovery system and by recovering water at the plant prior to the releasing of the tailings into the tailings storage facility
- By recovering water off the top of the tailings storage facility as quickly as possible and reusing it.

#### Potential Impacts – Dust

There is the potential for increased dust creation from earthworks for the road and mine, general mining operations and erosion of exposed surfaces. Potential impacts of dust on conservation significant species include:

- Coverage of foliage reducing photosynthesis and transpiration, resulting in reduced productivity and increased plant death, particularly relevant in areas adjacent to tracks.
- Alteration of habitat negatively impacting on conservation significant flora and fauna species.
- Salinisation for dust suppression measures.

## Threatened Species and Communities Management Strategy

| EMISSIONS TO AIR/LAND/WATER  |   |
|--|---|
| <b>Management Strategy</b>   |   |
| The increased vehicle movements and construction and mining operations have the potential to increase dust in Project areas. Dust mitigation will include: | <ul style="list-style-type: none"> <li>• Implementing CEMS and OEMS.</li> <li>• Minimising disturbance area to what is absolutely necessary by limiting clearing and progressively rehabilitating to limit windblown dust generation.</li> <li>•</li> <li>• Limiting road speeds near dust sensitive vegetation and ensure road speeds are managed on other road to reduce dust generation and safety issues</li> <li>• Implementing dust suppression techniques.</li> <li>• Internal roads in the Operational Area shall be watered at a rate that reduces dust generation to acceptable levels as required. This rate will be dependent upon climatic conditions at the time.</li> <li>• Minimise total surface disturbance at any one time to reduce areas potentially producing windblown dust.</li> <li>• Land clearing and topsoil stripping will not be undertaken during weather conditions likely to generate excessive dust.</li> </ul> |
| <b>Potential Impacts – Noise / Vibration</b>   |   |
| Excessive noise emissions and vibration associated with the construction and operation of the Project can potentially lead to:                             | <ul style="list-style-type: none"> <li>• Interference with fauna behaviour and movement.</li> </ul>   |
| <b>Management Strategy</b>   |   |
|  | <ul style="list-style-type: none"> <li>• All activities to be conducted in compliance with the <i>Environmental Protection (Noise) Regulations 1997</i>.</li> <li>• Implementation of the CEMS and OEMS.</li> <li>• Activities shall be managed according to weather conditions and proximity to noise and blasting sensitive areas.</li> </ul>   |

| <b>Issue Date</b>    | 16 December 2014                                       | December 2016 |

## Threatened Species and Communities Management Strategy

### ALTERATION TO TERRESTRIAL ECOSYSTEMS

|  |  |
|--|--|
| <b>Background</b>  | Improved access to the region has the potential to increase the number of people using the area for recreational purpose which in turn can increase the risk of anthropogenic fires, litter, off-track driving, invasive flora spread or introduction and the increase occurrence of invasive fauna. There is also the potential that Joint Venture activities could increase the risk of fire in the region   |
| <b>Potential Impacts – Changed Fire Regimes</b>                                      |  |
| Potential impacts on conservation significant species from accidental fire comprise: | <ul style="list-style-type: none"> <li>• Immediate deaths of conservation significant flora and fauna individuals and populations.</li> <li>• Loss of critical habitat such as Spinifex for fauna species reliant on long unburnt vegetation, or mosaic/patch style burning for example:             <ul style="list-style-type: none"> <li>○ Mulgara maintain a semi-permanent home within Spinifex, the burning of the Spinifex, whether by natural or man-made fire, poses a threat to Mulgara.</li> <li>○ The Sandhill Dunnart is Spinifex dependent; fire potentially reduces the variability of Spinifex age at a local scale, thus the availability and suitability of habitat for the Sandhill Dunnart.</li> <li>○ The Great Desert Skink is dependent on regeneration vegetation therefore changed fire regimes is the species' most significant threat.</li> </ul> </li> <li>• Loss of breeding habitat.</li> <li>• Increased proliferation of invasive flora.</li> <li>• Altered vegetation structure.</li> <li>• Altered habitat unable to provide conditions for conservation significant flora species to recolonise.</li> </ul> |
| <b>Management Strategy</b>   |  |
|  | <ul style="list-style-type: none"> <li>• Develop and implement appropriate fire protocols to reduce the risk of fire and to ensure fire is effectively managed.</li> <li>• Ensure the Project has an appropriate emergency response plan and equipment.</li> <li>• Ensure that the Project compile with <i>Bush Fire Act</i> requirements and fire bans.</li> <li>• Provide ongoing education and training regarding appropriate management and behaviour.</li> <li>• Correct storage and isolation of flammable liquids.</li> <li>• Establish appropriate fire breaks adjacent to high fire risk areas.</li> </ul>  |

THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT

|                      |  |               |

| <b>Document Name</b> | Threatened Species and Communities Management Strategy | 35 of 47      |
| <b>Author</b>        | 360 Environment / B Bastow                             | B Bastow      |
| <b>Issue Date</b>    | 16 December 2014                                       | December 2016 |

## Threatened Species and Communities Management Strategy

| ALTERATION TO TERRESTRIAL ECOSYSTEMS      |  |
|---|--|
| <b>Potential Impacts – Invasive Flora</b> | <ul style="list-style-type: none"> <li>• Implementation of safe smoking practices and appropriate disposal of cigarette butts.</li> <li>• Work with DPaW to reduce the risk of fires in the region.</li> </ul>   |
| <b>Potential Impacts – Invasive Flora</b> | <ul style="list-style-type: none"> <li>• Interfering with natural function.</li> <li>• Displacing threatened flora species.</li> <li>• Out-competing threatened species for resources.</li> <li>• Degradation of critical habitats for conservation significant flora and fauna species.</li> <li>• Inhibiting regeneration of threatened flora.</li> <li>• Changing fire characteristics resulting in altered habitats for conservation significant flora and fauna species.</li> <li>• Reduced success of rehabilitation.</li> </ul>   |
| <b>Management Strategy</b>                | <p>Mitigation measures are required to control and prevent the spread of invasive flora previously recorded within the Project footprint and to minimise the potential for the introduction of any additional invasive flora. The risk of introducing invasive flora will be minimised through the implementation of the following management measures:</p> <ul style="list-style-type: none"> <li>• Invasive flora management procedures to be developed and implemented to identify areas of risk, permitted access and inspections to be undertaken.</li> <li>• Implementation of the Construction and Environmental Management Strategy (CEMS) and the Operational Environmental Management Strategy (OEMS).</li> <li>• Strict vehicle hygiene practice will be adopted by staff and contractors, with all machinery, vehicles and plant to be free of soil and vegetative matter upon arrival to Joint Venture controlled areas.</li> <li>• Strict vehicle hygiene practice will be adopted by staff and contractors, with all machinery, vehicles and plant to be free of soil and vegetative matter when moving between weed infested and un-infested areas (most relevant on the Infrastructure Corridors as there is little weed presence at the Operational Area).</li> <li>• Work in known invasive flora infested areas will be undertaken separately to work in pristine areas. This relates mainly to work in the Pinjin area. Any vehicles moving between the Pinjin area and other areas during clearing and construction will be thoroughly cleaned of soil and vegetation matter.</li> <li>• Develop a process to limit the risk of soil/ invasive flora transfer by clearing equipment.</li> <li>• Induction programs to promote awareness of invasive flora management measures that are to be used at the Joint Venture.</li> <li>• Provide specific training in invasive flora identification and eradication measures to relevant Joint Venture personnel and contractors.</li> </ul> |

## Threatened Species and Communities Management Strategy

### ALTERATION TO TERRESTRIAL ECOSYSTEMS

- Undertake regular Project footprint inspections to record new observations of invasive flora infestations or changes in invasive flora distribution especially near known populations of DRF. An invasive flora tracking system will be implemented for recording invasive flora populations or high risk areas.
- Any soil / fill brought to site will be certified free of propagules of invasive flora.
- Gravel and borrow material will be sourced locally, therefore free of phytophora and invasive flora.
- Domestic waste to be disposed of in the correct manner to prevent seed invasion from food waste products.
- Specific control measures and treatment programs for invasive flora that have been recorded on the Joint Venture tenements will be developed in consultation with DPaW, where appropriate.
- Invasive flora control to be implemented in rehabilitation works.
- Clean seeds will be used to rehabilitation.
- Seed will be harvested locally to reduce the risk of new invasive flora introduction.

#### Potential Impacts – Invasive Fauna

Invasive fauna such as the European Fox (*Vulpes vulpes*), Wild Dog (*Canis lupus*) and Feral Cat (*Felis catus*) potentially pose a threat to all threatened species in the Project footprint. The construction and operation of the Project may provide additional resources (food or water) for invasive species if inappropriately managed. The attraction of invasive fauna to the area may impact conservation significant fauna and flora by:

- Competing with threatened species.

- Direct predation on threatened species. The Sandhill Dunnart, Mulgara, Malleefowl, the SMM and the Woma Python are highly susceptible to predation. Remains of the SMM have been recorded in the scats of Feral Cats, Wild Dogs and European Foxes.

- Habitat degradation including compression of dunes and trampling and habitat alteration from Camels (*Camelus dromedarius*) or Goats (*Capra hircus*). This may adversely affect the habitat of threatened fauna or their local movement and dispersal. Compaction of substrate from Camels may adversely affect the availability of invertebrate prey. As the majority of the species of interest are insectivorous this may impact on food availability.

- Herbivorous grazing or trampling of conservation significant flora species.

- Grazing of rehabilitated areas thus degrading habitat.

## Threatened Species and Communities Management Strategy

### ALTERATION TO TERRESTRIAL ECOSYSTEMS

#### Management Strategy

The risk of introducing animal species to Project Areas will be mitigated in the following ways:

- No pets will be allowed in Project areas.
- Putrescible wastes will be disposed of in accordance with legal obligations.
- Access to water by animal will be managed.
- Project stormwater management to minimise the unplanned ponding of water.
- Maintenance of taps and other water infrastructure to prevent leaks.
- All personnel will be discouraged from feeding fauna.
- Support and implement Pest Management Strategies informed by a risk management approach.
- Pest Management Strategies that aim to reduce impacts rather than reduce numbers of individuals will be developed (in consultation with appropriate organisations such as DPaw).
- Support regional studies into invasive fauna populations across the Joint Venture with the aim of improving pest management.

#### Potential Impacts - Traffic

The construction and operation of the Project and access road will increase traffic flows in the areas. Increased vehicle movements along the access road, especially of large vehicles may result in the following impacts on conservation significant species:

- Mortality of individual fauna through direct collisions with vehicles.
- Injury of individual fauna through direct collisions with vehicles.
- Erosion and compaction of substrate from unauthorised off-road driving potentially altering the ability of animals and pollinators to move through the landscape.
- Hazardous spills resulting in land contamination (e.g. following an accident).
- Fire.
- Generation of dust.

#### Management Strategy

- Implement and enforce an appropriate speed limit on all roads taking into account risks associated with threatened fauna.
- Infrastructure Corridors (including access roads) will be designed to avoid bisecting critical habitats.

## Threatened Species and Communities Management Strategy

### ALTERATION TO TERRESTRIAL ECOSYSTEMS

#### Performance Indicators

#### Fire

- State, Federal or Priority listed species or communities.
- No adverse impacts of State, Federal or Priority listed species or communities.
- No adverse impacts of State, Federal or Priority listed species habitats.
- No regional impacts.

#### Invasive Flora

- Invasive flora.
- No invasive flora introduced as a result of the Project.
- No spread of invasive flora from an existing location.

#### Invasive Fauna

- Invasive fauna.
- No invasive fauna introduced to the area as a result of the Project.
- No spread of invasive fauna.
- State, Federal or Priority listed species or communities.
- No adverse impacts on State, Federal or Priority listed species or communities.

## 14 TRAINING AND AWARENESS

To ensure the effective implementation of this and other strategies associated with the Project, a site specific induction has been developed and includes general information on the threatened and priority flora, fauna and communities known to occur within the Project area. All employees and contractors permanently based onsite are required to complete the sites general induction.

To complement the site induction, the Project incorporates Threatened Species and Community awareness topics will be periodically roll-out across the operation, the topics will comprised of toolbox information and posters that are distributed across site to ensure ongoing awareness of the management measures associated with this strategy.

## 15 REHABILITATION AND SEED BANKING

Over the life of the Project the TJV will work with regional seed collectors to obtain viable seed for known priority and DRF species within and adjacent to the Project area. These resources will be shared with DPaW and used to return these species to the post mining landscape.

Priority and DRF seed collections will be undertaken with in accordance with the WA Wildlife Conservation Act and regulations and DPaW requirements. Seed collected will be lodged with DPaW through the Threatened Flora Seed Centre (housed at the WA herbarium). Where practical plant material, photographs and location data will be lodged with the seeds to enable confirmation of ID and expand the States knowledge of the collected species.

## 16 DATA MANAGEMENT AND INCIDENT REPORTING

The TJV will at least annually provided DPaW with threatened systems and community data in the form of location information, photographs (where appropriate), herbarium samples and survey reports. This information will be provided to both the Regional Office and directly with the Threatened Species and Community Branch.

Should the TJV (or its contractors) encounter threatened fauna species efforts will be made to collect DNA samples from live specimens and to preserve and lodge specimens of deceased animal encountered. This material will be provided to the WA Museum as soon as practical after collection.

In accordance with the sites Incident reporting procedure, non-compliance with this strategy will be treated as an incident and will be reported via the site incident reporting system (InControl). Incidents that directly involve priority or threatened fauna species will be reported to DPaW within 24hrs of reporting to the sites Environmental team, these reports will be lodged via [fauna@dpaw.wa.gov.au](mailto:fauna@dpaw.wa.gov.au) as required.

## 17 MEASUREMENTS AND MONITORING

The implementation and effectiveness of this strategy will be audited as specified in the TGM Audits and Inspection schedule. A copy of the audit findings will be provided to DMP, DPaW and the OEPA following completion.

Established performance indicators and targets set out in Section 13 (above) will be assessed bi-annually and reported to DPAW and DMP via a TS&CMS Performance Report.

**Appendix 1: Flora Conservation Codes**

| Protected Under:          | Category               | Description  |
|---------------------------|------------------------|--|
| EPBC Act                  | Extinct                | There is no reasonable doubt that the last member of the species has died.   |
|                           | Extinct in the Wild    | A native species: <ul style="list-style-type: none"> <li>is known only to survive in cultivation or as a naturalised population well outside its past range; and,</li> <li>has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.</li> </ul>   |
|                           | Critically Endangered  | A native species facing an extremely high risk of extinction in the wild in the immediate future.  |
|                           | Endangered             | A native species: <ul style="list-style-type: none"> <li>is not critically endangered; and</li> <li>is facing a very high risk of extinction in the wild in the near future.</li> </ul>  |
|                           | Vulnerable             | A native species: <ul style="list-style-type: none"> <li>is not critically endangered or endangered; and</li> <li>is facing a high risk of extinction in the wild in the medium-term future.</li> </ul>  |
|                           | Conservation Dependent | The species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered.   |
| Wildlife Conservation Act | Declared Rare Flora    | A native species which has been adequately searched for, and is deemed to be in the wild either rare, in danger of extinction, or otherwise in need of special protection, and has been gazetted as such, following approval by the Minister for the Environment, after recommendation by the State's Endangered Flora Consultative Committee.   |
| DPaW Priority             | Priority 1             | A native species which is known from one or a few (generally <5) populations which are under threat, either due to small population size, or being on lands under immediate threat, e.g., road verges, urban areas, farmland, active mineral leases, etc., or the plants are under threat, e.g., from disease, grazing by invasive fauna, etc. May include taxa with threatened populations on protected lands. Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey. |
|                           | Priority 2             | A native species which is known from one or a few (generally <5) populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in urgent need of further survey.   |
|                           | Priority 3             | A native species which is known from several populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as 'rare flora', but are in need of further survey.  |
|                           | Priority 4             | A native species which is considered to have been adequately surveyed and which, whilst being rare (in Australia), are not currently threatened by any identifiable factors. These taxa require monitoring every 5–10 years.   |

## Threatened Species and Communities Management Strategy

| Protected/<br>Recognised<br>Under: | Category   | Description   |
|------------------------------------|------------|---|
| DPaW Priority                      | Priority 1 | A native species that is known from few specimens or sight records from one or a few localities on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, active mineral leases. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.   |
|                                    | Priority 2 | A native species that is known from few specimens or sight records from one or a few localities on lands not under immediate threat of habitat destruction or degradation, e.g., national parks, conservation parks, nature reserves, State forest, vacant Crown land, water reserves, etc. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna. |
|                                    | Priority 3 | A native species that is known from few specimens or sight records from several localities, some of which are on lands not under immediate threat of habitat destruction or degradation. The taxon needs urgent survey and evaluation of conservation status before consideration can be given to declaration as threatened fauna.  |
|                                    | Priority 4 | A native species that is considered to have been adequately surveyed, or for which sufficient knowledge is available, and which are considered not currently threatened or in need of special protection, but could be if present circumstances change. These taxa are usually represented on conservation lands.   |
|                                    | Priority 5 | A native species that is not considered threatened but is subject to a specific conservation program, the cessation of which would result in the species becoming threatened within five years.   |

**Attachments:** TGM TSCMS\_December 2014.pdf; DPaw comments on TSCMS and AGAA response.pdf

Hi Julie,

Thank you for your comments on the TGM Threatened Species and Communities Management Strategy. Your comments have been incorporated into the amended version of the strategy (December 2014) and a copy is attached for your information. I have also attached a table which summarises how we have addressed your comments and maps our response to the section of the strategy that has been updated.

Should you require any additional information please feel free to contact me on 9265 2213.

Kind regards

Emma

Hi Belinda,

Thank you for your time to talk through my comments last week it was most helpful. Please find attached the Department's comment sheet in relation to the updated Tropicana Gold Mine - Threatened Species and Community Management Strategy. If you have any queries please do not hesitate to contact me – I am out in the field over night but will be back in the office from Wednesday.

I hope the Trust Launch went great.

Kind regards,

Julie

## Document Review Comments Sheet

| <b>Document Title:</b>        |                          | Tropicana Gold Project Threatened Species and Communities Management Strategy  |  |
|-------------------------------|--------------------------|--|--|
| <b>Document Revision:</b>     |                          | March 2014   |  |
| <b>Date of Review:</b>        |                          | October 2014   |  |
| <b>Date comments provided</b> |                          | December 2014  |  |
| <b>Item No.</b>               | <b>Section No./Title</b> | <b>Reviewer Comment / Advice</b>   | <b>AGAA response to DPaW comments and changes made to TSCMS (16<sup>th</sup> December 2014)</b>  |
| 1                             | Monitoring               | The document does not provide clarification on how the success of Threatened Species and Communities Management Strategy's environmental procedures will be assessed and reviewed in relation to the identified performance indicators. Parks and Wildlife recommends measurable indicators are set and that a reporting requirement is included in the management strategy. For example - how are no adverse impacts or no detrimental changes within the performance indicator targets being measured? If performance indicators are not being met, it is recommend Anglo seeks consultation with Parks and Wildlife to discuss management strategy options. | A new section (Section 17- Measurements and Monitoring) has been included in the amended version of the TS&CMS to address reporting requirements. A TS&CMS Performance Report will be developed bi-annually to assess performance against indicators and targets outlined in Section 13 of the strategy. The first report will map out the tools used to measure compliance.   |
| 2                             | Future Proposals         | Parks and Wildlife recommends that the management strategy addresses what considerations Threatened species and communities will be given during the development of any future proposals for infrastructure etc for the Tropicana Gold Project. These could include but not be limited to ensuring recommend survey protocols and timing are followed and options analyses are conducted to reduce potential impacts to Threatened species.  | Section 3 (Scope and review protocols) of the TS&CMS has been updated to clearly state that the Strategy applies to all activities (current and future) associated with the Project as well as extending to exploration activities undertaken within the operational area mining leases. Baseline flora and fauna surveys are conducted in accordance with the EPA Guidance statements including Guidance statement 51, 54 and 56. |
| 3                             | Reporting                | If not included elsewhere in Anglo's environmental management procedures Parks and Wildlife would appreciate that Threatened and Priority flora and fauna encountered and / or incidents (i.e. injuries or   | A new section (Section 16 – Data management and incident reporting) has been included in the amended version of the TS&CMS to address data collection,   |

|   |                 |  |  |
|---|-----------------|--|--|
|   |                 | deaths) relating to fauna are reported to the Department ( <a href="mailto:fauna@dpaw.wa.gov.au">fauna@dpaw.wa.gov.au</a> ). Furthermore, if conservation significant fauna species are encountered during field surveys Parks and Wildlife recommends DNA samples (e.g. ear clips) are taken and provided to the WA Museum for their collections. | submission and incident reporting requirements.  |
| 4 | Seed Bank       | To help safe guard Declared Rare and Priority flora species Parks and Wildlife asks that samples from Anglo's collection for the <i>ex situ</i> seed banking are contributed to the Threatened Flora Seed Centre (Housed in the WA Herbarium) for permanent collection.  | A new section (Section 15 –Rehabilitation and seed banking) has been included in the amended version of the TS&CMS to address requirements associated with seed collection and lodgment to DPaW.   |
| 6 | Document Review | It is recommend any future approved footprint areas associated with the Tropicana Gold Project are included in the future document revisions and the management strategy is included in mine site inductions for proposed works by Anglo's employees and contractors.  | A new section (Section 14 – training and awareness) has been included in the amended TS&CMS to highlight existing measures to improve awareness of site personnel of the significant flora and fauna of the region and management requirement to protect them. |

Hi Julie,

It was great to catch up with you at the Sandhill Dunnart workshop on 11/11 and it certainly sounds as if you have been busy.

During the workshop you indicated that you should have time in the coming week to provide feedback to TGM on the Threatened Species and Community Management Strategy. We are just wondering how you are progressing as we must include a copy of the updated strategy in our annual report to the OEPA this year. The report is due in December.

We look forward to and await your feedback.

## MEMORANDUM

**Date:** 28<sup>th</sup> November 2014  
**To:** Sustainability Department  
**From:** Melissa Bolton  
**Subject:** Threatened Species Management Strategy Internal Audit

An internal audit of the Threatened Species and Communities Management Strategy was undertaken between the 14<sup>th</sup> and the 18<sup>th</sup> of November 2014. The audit template covered all aspects detailed in Section 13 Threats and Mitigation of the Threatened Species and Communities Management Strategy. The audit was developed around 13 key aspects including:

1. Clearing/ earthworks;
2. Environmentally hazardous substances;
3. General waste;
4. Tailings;
5. Dust;
6. Noise/ vibration;
7. Water sources/ storages;
8. Erosion/ sedimentation;
9. Terrestrial ecosystems – fire regimes;
10. Terrestrial ecosystems – invasive flora;
11. Terrestrial ecosystems – invasive fauna;
12. Terrestrial ecosystems – traffic; and
13. Terrestrial ecosystems – increase use of region nature reserves.

This audit determined a high level of compliance with the Threatened Species and Communities Management Strategy, with an overall score of 93%. **Table 1** below outlines the scores for each of the aspects and **Table 2** summarises the actions required to be undertaken. The completed audit table is provided in Appendix 1.

**Table 1: Audit scores of key aspects**

| Aspect                               | Score |
|--------------------------------------|-------|
| Clearing/ earthworks                 | 100%  |
| Environmentally hazardous substances | 86%   |
| General waste                        | 100%  |
| Tailings                             | 71%   |

| <b>Total</b>  | <b>93%</b> |

**Table 2: Actions assigned following audit**

| Actions   |
|---|
| Ensure leak detection systems are installed on all pipelines  |
| Develop and roll out spill kit awareness training   |
| Undertake ongoing and additional workforce awareness training on waste management and recycling protocols           |
| Install toe drains on the outside of the TSF  |
| Continue to work towards Cyanide Code Certification   |
| Ensure all fauna egress points are fastened to the bottom of water storage facilities to ensure they are effective. |
| Install additional storm water drains around site (pending approval of Mining Proposal)                             |
| Surface hydrologist to be engaged to review the requirements of site stormwater management                          |

TGM Threatened Species and Communities Management Strategy  
Internal Audit - Environmental Compliance

| Audit undertaken by:  | Supervisor:   | Date of Audit:                           | Communicated: |    | Observations/Findings/Comments  |
|---|---------------|--|---------------|----|---|
|   |               |  | Yes           | No |   |
| 1   | Craig Maxwell | 14th November 2014 to 18th November 2014 |               |    |   |
| <p><b>1 Clearing/ Earthworks</b></p> <p>Disturbance to native vegetation is minimised with clearing confined to the minimum area practicable.</p> |               |  |               |    |   |
| 1.1   |               |  | X             |    | All clearing undertaken is approved through GDP boundaries to minimise disturbance to native vegetation.  |
| 1.2   |               |  | X             |    | All clearing is clearly delineated within GDP application form.   |
| 1.3   |               |  |               | X  | Declared Rare Flora (DRF) within 50 m of disturbance areas are visibly demarcated. During construction, DRF were demarcated, since this time, the DRF were delisted. No current DRF in the Operational Area.  |
| 1.4   |               |  | X             |    | Prior to clearing being undertaken, a GDP is required. The GDP requires specific details of the proposed disturbance. During the GDP assessment process, a desktop assessment is undertaken to determine if there will be any impacts to DRF or priority flora and whether the proposed disturbance can be relocated to avoid the DRF or priority flora. A site inspection (pre clearing inspection) may also be undertaken in areas outside the PER boundary to ensure disturbance to DRF and Priority Flora is avoided. |
| 1.5   |               |  | X             |    | Following approved ground disturbance activities, the area disturbed is verified through survey. Additionally, annual aerial surveys assist in the identification of any unauthorised disturbance. Induction includes material on unauthorised clearing.  |
| 1.6   |               |  | X             |    | Photographic dust vegetation monitoring is undertaken to monitor impacts from the Project to surrounding vegetation. Monitoring has not identified any loss of vegetation in uncleared areas.   |
| 1.7   |               |  | X             |    | Roads located on high points, culverts installed on site access roads to allow water to flow underneath the road to prevent interference with sheet flow. Re-evaluate current design of the borefield access road to determine whether culverts or additional surface water management measures are required.   |
| 1.8   |               |  | X             |    | Surface water diversions in place around site to intercept surface water and prevent offsite impacts. Waste Rock Landforms have been designed with a toe drain and collection point to prevent sedimentation down stream.   |
| 1.9   |               |  | X             |    | Environmental values were taken into consideration during project footprint design. Minimising impacts to avoidance areas. TSF was re-evaluated, original TSF design comprising of valley fill utilising the nearby sand dunes as containment walls. The sand dunes however were subsequently recognised as significant habitat, and the TSF design was re-evaluated to prevent impact to the sand dunes.   |
| 1.10  |               |  | X             |    | Tropicana works activity with and regularly collaborates with the Department of Fire and Emergency Services (DFES) to determine suitable fire regimes.  |
| 1.11  |               |  | X             |    | Fire breaks located in the following locations: Village, explosives magazine and exploration camp. Considering installing additional firebreaks - determining where these may be required. Firebreaks will be installed if there is an imminent risk of fire.   |
| 1.12  |               |  |               | X  | No extensions or amendments to the pit has been undertaken beyond the current approval.   |
| 1.13  |               |  | X             |    | Key habitats have been avoided. One Priority Ecological Community (PEC) could not be avoided - positioned to be minimised. The Environmental and Heritage Inspection (EIN) and ground disturbance permitting (GDP) processes aim to minimise impacts to environmentally sensitive areas.  |

**TGM Threatened Species and Communities Management Strategy**  
**Internal Audit - Environmental Compliance**

|      |  |    |   |    |   |
|------|--|----|---|----|---|
| 1.14 | Disturbance to possible Mallee fowl and Sandhill Dunnart habitats has been minimised where practicable (including areas of spinifex unburnt between eight and 38 years). | X  |   |    | Infrastructure locations and project footprint has been placed to avoid and minimise disturbance to significant habitats including sand dunes and areas of unburnt spinifex).   |
| 1.15 | Locations of critical threatened fauna habitat have been avoided (including Mallee fowl mounds, Bustard nests and sand dunes).   | X  |   |    | Infrastructure locations and project footprint has been placed to avoid and minimise disturbance to significant habitats including sand dunes and areas of unburnt spinifex).   |
| 1.16 | Locations of Priority Ecological Communities (PEC) have been avoided.  | X  |   |    | One Priority Ecological Community (PEC) could not be avoided - positioned to be minimised. The Environmental and Heritage Inspection (EIN) and ground disturbance permitting (GDP) processes aim to minimise impacts to environmentally sensitive areas through the identification of PEC locations in relation to proposed disturbances. |
| 1.17 | Removal of large mature habitat trees has been avoided (particularly Marble Gum).  | X  |   |    | The project footprint was placed to avoid the removal of mature habitat trees. During clearing, areas marked in the field further minimised the impact to large trees.  |
| 1.18 | Rehabilitation is undertaken as soon as is practicable.  | X  |   |    | Borrow pits along the access road have been rehabilitated. Ground Zero area has been rehabilitated. A rehabilitation plan will be developed for the mining area to enable and plan progressive rehabilitation of landforms.   |
| 1.19 | Rehabilitation areas are monitored for presence of weeds   |    | X |    | Currently limited rehabilitation areas in place. Following the commencement of progressive rehabilitation, a rehabilitation plan including monitoring for weeds will be implemented.  |
| 1.20 | Information on current flora and fauna conservation status is maintained   | X  |   |    | The Threatened Species and Community Management Plan was updated to reflect changes in listings in 2014.  |
| 1.21 | Site induction includes information on conservation significant flora, vegetation, fauna and habitat.  | X  |   |    | Site induction covers content on flora and fauna in the region. All employees are provided with a handbook which outlines provides information on threatened species (flora and fauna).   |
| 1.22 | Open trenches are cleared and inspected for fauna at sunrise and sunset.   | X  |   |    | Suitably qualified fauna clearing personnel (360 Environmental) inspecting borefield trenches from pipeline activities.   |
| 1.23 | Trenches do not exceed a length capable of being inspected by fauna clearing person.   | X  |   |    | Trenches to be inspected are to be of a length appropriate that the fauna clearing person can get to the trenches within the required timeframes (three hours after sunrise and three hours after sunset). Additional fauna clearing personnel to be placed on the project or trenching to reduce to enable this to occur                 |
| 1.24 | Fauna refuges and/or egress ramps are placed in the trench at 50 m intervals   | X  |   |    | Currently borefield expansion and pipeline laying trenches have adequate fauna egress.  |
| 1.25 | Report on fauna management following trenching activities has been produced.   | X  |   |    | Upon completion of the borefield expansion trenching activities, a report will be produced by the fauna clearing personnel (360 Environmental).   |
|      |  | 22 | 0 | 3  |   |
|      |  | 22 | 1 | 22 | 100%  |

| 2   | Environmentally Hazardous Substances  | Compliance |     | Observations/Findings/Comments  |
|-----|---|------------|-----|---|
|     |   | Yes        | No  |   |
| 2.1 | The placement of storage, re-fuelling, handling and disposal facilities avoids critical habitat                           | X          | N/A | The project footprint was placed to avoid critical habitat  |
| 2.2 | All pipelines are buried or banded, have leak detection systems and automatic cut off systems                             | X          |     | Pipelines are buried. Not all pipelines have leak detection systems in place. Leak detection systems will be installed on all pipelines (currently in progress).  |
| 2.3 | The pipeline corridor to the Mingwal borefield avoids threatened or conservation significant species                      | X          |     | Designed to avoid critical habitat - minimise impact zones.   |
| 2.4 | Hydrocarbons and chemicals are stored as per site procedures and Australian Standard 1940                                 | X          |     | Facility inspections and audits are undertaken regularly to ensure hydrocarbons and chemicals are stored appropriately. Refer to the Audit Schedule.  |
| 2.5 | Dangerous Goods licensing covers all hazardous materials on site  | X          |     | Chemical request process ensure that the Dangerous Goods Licence is considered prior to the chemical being approved for use on site.  |
| 2.6 | Evidence of appropriate spill containment at refuelling bays and bulk storage facilities                                  | X          |     | Spill kits are located at refuelling bays and at bulk storage facilities  |
| 2.7 | Evidence of implementation of Emergency Response Procedures for hydrocarbon spills  | X          |     | Emergency response team have attended significant hydrocarbon spill incidents as required.  |
| 2.8 | Evidence of spill kit training records for relevant staff.  | X          |     | This has been identified as a requirement. A spill kit awareness course will be developed and roll out across site.   |
|     |   | 7          | 1   | 0   |
|     |   | 7          | 7   | 8   |
|     |   |            |     | 88%   |
| 3   | General Waste   | Compliance |     | Observations/Findings/Comments  |
| Yes | No  | N/A        |     |   |
| 3.1 | Housekeeping and strict waste management practices  | X          |     | Waste management practices are in place, although further education of the workforce may be required.   |
| 3.2 | All domestic waste is disposed within the licensed waste management facility  | X          |     | Yes - prescribed premises license includes this facility  |
| 3.3 | All domestic rubbish bins have lids   | X          |     | Yes - wheelie bins with lids are utilised for domestic waste.   |
| 3.4 | Waste stations are labelled for the appropriate segregation of waste (e.g. recyclables, general waste, hydrocarbon waste) | X          |     | Yes - however there is some need for improvement with respect to workforce training to ensure employees are aware of appropriate disposal.  |
| 3.5 | Putrescible and inert waste is disposed of and covered within the licensed waste management facility.                     | X          |     | Yes - the landfill is regularly maintained and contains putrescible and inert waste only.   |
|     |   | 5          | 0   | 0   |
|     |   | 5          | 7   | 5   |
|     |   |            |     | 100%  |
| 4   | Tailings  | Compliance |     | Observations/Findings/Comments  |
| Yes | No  | N/A        |     |   |
| 4.1 | The TSF design contains any potentially contaminated runoff, preventing uncontrolled discharge                            |            | X   | The TSF design does not currently contain contaminated runoff, however no tailings have been released during an event where sediment laden water run off the northern side. No toe drain in place. Tailings discharge pipelines designed to capture spills. Leak detection systems in place. Toe drain to be installed on the outside of the TSF.                                   |
| 4.2 | WAD CN levels in free water on the TSF do not exceed 50 mg/L  | X          |     | Monthly decant pond water sampling undertaken since March 2014, the monthly data indicates that the WAD CN level has not exceeded 50 mg/L. The WAD CN levels are also measured daily from the TSF Decant pond. These results indicate that there has been two spikes in WAD CN levels, one recorded on the 9th of July recording 90 mg/L and 58.10 mg/L on the 19th of August 2014. |
| 4.3 | Compliance with the International Cyanide Management Code   |            | X   | Currently working toward achieving Cyanide Code Certification.  |
| 4.4 | Animal access is restricted   | X          |     | The TSF is fenced. Freshwater fauna ponds have been placed in locations outside of the TSF to attract fauna to these ponds over the TSF.  |
| 4.5 | The TSF Management Strategy has been implemented.   | X          |     | Tailings Storage Facility Monitoring and Maintenance Manual.  |
| 4.6 | TSF design limits seepage through the installation of a basin liner, seepage recovery system and water recovery.          | X          |     | Seepage Recovery System installed. Compacted clay liner and HDPE liner underlying the decant. (300 mm liner).   |
| 4.7 | Operation of TSF limits volume of water stored on the TSF at any one time (through re-use)                                | X          |     | Water recycled on site. Second line installed to increase water recovery.   |
|     |   | 5          | 2   | 0   |
|     |   | 5          | 7   | 71%   |

| 5   | Dust   | Compliance |     | Observations/Findings/Comments   |
|-----|--|------------|-----|--|
|     |  | Yes        | No  |  |
| 5.1 | Evidence of implementation of the CEMS and OEMS  | X          | N/A | Dust suppression - including water carts and dust monitoring program in place  |
| 5.2 | Pollution control devices (e.g. dust suppressants) operational and maintained in accordance with manufacturer's instructions       | X          |     | Dust suppression - including water carts   |
| 5.3 | No excessive water pooling from dust suppression   | X          |     | Occasional salt crust build up on sides of roads as a result of dust suppression, but no evidence of ponding.  |
| 5.4 | Disturbance is minimised and progressive rehabilitation undertaken to reduce the potential for dust generation from cleared areas. | X          |     | Disturbance is undertaken progressively to minimise dust generation. Progressive rehabilitation will be undertaken.  |
| 5.5 | Growth medium stripping and clearing activities are undertaken in appropriate weather conditions                                   | X          |     | Yes growth medium is stripped in dry conditions only.  |
| 5.6 | Road speeds are limited to reduce dust generation.   | X          |     | The road speeds on site do not exceed 60 km/hr., the access road permits speed up to 80 km/ hr. All employees are required to drive to the conditions.   |
|     |  | 6          | 0   | 100%   |
|     |  | 6          | 7   | 6  |
| 6   | Noise/ Vibration   | Compliance |     | Observations/Findings/Comments   |
| 6.1 | Noise levels acceptable  | Yes        | No  |  |
| 6.1 | Noise levels acceptable  | X          | N/A | Noise surveys are undertaken every 5 years. Impacts of noise are very localised.   |
| 6.2 | Vibration is being controlled  | X          |     | Modifications have been undertaken on the processing plant to reduce the impact of vibration.  |
|     |  | 2          | 0   | 100%   |
|     |  | 2          | 7   | 2  |
| 7   | Water Sources/ Storage   | Compliance |     | Observations/Findings/Comments   |
| 7.1 | Water storage areas are fenced   | Yes        | No  |  |
| 7.1 | Water storage areas are fenced   | X          |     | Twin turkeys, Kamikaze Turkeys nest, WWTP ponds and Process Water Ponds are fenced with lockable gates   |
| 7.2 | Fauna egress and/or nets have been incorporated into permanent water storage sites   | X          |     | Nets are located in ponds, however some nets are not fastened to the base of the pond - which may compromise the integrity and accessibility to fauna to utilise.  |
| 7.3 | Evidence of fauna deterrent methods  | X          |     | Fencing in place, egress and artificial water ponds in place to attract fauna to these ponds in lieu of the TSF. There is also a gas cannon to deter birds from the TSF.   |
| 7.4 | No animals trapped/ caught in fence, water storage facility or tailings.   | X          |     | Although water storages are fenced, there has been two kangaroos caught in the TSF, one resulted in a fatality, and the other was a successful release, two dogs caught in the wash down bay turkeys nest, one resulted in a fatality and the other a successful release and one emu was caught in one of the waste water treatment plant ponds, which was successfully released. Continue to inspect facilities to ensure fencing is adequate and there is suitable fauna egress. |
|     |  | 3          | 1   | 0  |
|     |  | 3          | 7   | 4  |
|     |  |            |     | 75%  |

| 8    | Erosion/ Sedimentation   | Compliance |    | Observations/Findings/Comments   |
|------|--|------------|----|--|
|      |  | Yes        | No |  |
| 8.1  | Evidence of routine inspections of erosion and sediment control structures                         | X          |    | Facility audits and inspections are undertaken which include aspects of erosion and sediment control. A separate inspection of site diversions and drains and sediment traps on landforms to be undertaken.  |
| 8.2  | Evidence of stormwater drains within the operational area.   | X          |    | Large diversion drain around site. Mining Proposal submitted included requirement for additional storm water drains  |
| 8.3  | Installation of an effective diversion system to separate clean and dirty water                    | X          |    | Large diversion drain around site. Mining Proposal submitted included requirement for additional storm water drains  |
| 8.4  | Evidence of dust control measures  | X          |    | Dust suppression measures in place - water carts, sprinklers on stockpiles   |
|      |  | 3          | 1  | 0  |
|      |  | 3          | 7  | 4  |
|      |  |            |    | 75%  |
| 9    | Terrestrial Ecosystems - Fire Regimes  | Compliance |    | Observations/Findings/Comments   |
|      |  | Yes        | No |  |
| 9.1  | Flammable liquids are stored appropriately   | X          |    | Flammable Liquids are stored as per Dangerous Goods License requirements.  |
| 9.2  | Fire protocols have been implemented to reduce the risk of fire                                    | X          |    | Tropicana works activity with and regularly collaborates with the Department of Fire and Emergency Services (DFES). Fire activity is monitored by the Emergency Response Team.   |
| 9.3  | Fire breaks have been established adjacent to high risk areas                                      | X          |    | Fire breaks located in the following locations: Village, explosives magazine and exploration camp. Considering installing additional firebreaks - determining where these may be required. Firebreaks will be installed if there is an imminent risk of fire.      |
| 9.4  | Designated smoking areas and provision of appropriate cigarette disposal.                          | X          |    | Designated smoking areas established on site. Cigarette Butt disposal pockets available to all employees on site.  |
| 9.5  | Collaboration with regulators to reduce the risk of fires  | X          |    | Data collation undertaken by Department of Fire and Emergency Services to gather fuel load information.  |
|      |  | 5          | 0  | 0  |
|      |  | 5          | 7  | 5  |
|      |  |            |    | 100%   |
| 10   | Terrestrial Ecosystems - Invasive Flora  | Compliance |    | Observations/Findings/Comments   |
|      |  | Yes        | No |  |
| 10.1 | Invasive flora management procedures have been implemented   | X          |    | Weed Hygiene Certificate process has been successfully implemented. Additional procedures to be implemented, to increase workforce awareness, and cover other foreign objects brought to site with the risk of contamination such as timbers.                      |
| 10.2 | Strict Vehicle hygiene practices implemented   | X          |    | All new vehicles/ equipment mobilised to site, require a notification form which provides details of the last service, location utilised and last clean. Upon arrival to site, the Environment team will inspect all equipment in order to grant approval for use. |
| 10.3 | Inductions and training promote awareness of weeds   | X          |    | Induction includes content on weeds and the strict vehicle mobilisation protocols. Following the recent infestation of the prickly lettuce weed, site wide posters and tool box training was implemented around site.  |
| 10.4 | Inspections are undertaken to record invasive flora infestation or changes in invasive flora.      | X          |    | Following the recent prickly lettuce infestation and removal, a monitoring programme was established to prevent regeneration of the species.   |
| 10.5 | All soil brought to site is certified weed free.   | X          |    | Only certified weed free soil can be brought to site.  |
| 10.6 | Control and treatment measures for weeds are developed in consultation with DPaW where appropriate |            |    | X  |
| 10.7 | Clean seed and local seed only to be harvested for use in rehabilitation                           |            |    | X  |
|      |  | 5          | 0  | 2  |

**Appendix 7: Internal audit of groundwater monitoring methodology and results against the Australian Water Quality Guidelines for Fresh and Marine Waters and Water Quality Monitoring and Reporting**

## MEMORANDUM

**Date:** 28<sup>th</sup> November 2014  
**To:** Sustainability Department  
**From:** Melissa Bolton  
**Subject:** Monitoring Strategy Internal Audit

### Groundwater and Surface Water

An internal audit of the water quality monitoring methodology outlined in the TGM Monitoring Strategy was undertaken against the *Australian Guidelines for Water Quality Monitoring and Reporting (2000)* in November 2014. The audit covered seven key aspects including:

1. monitoring preparation;
2. contamination prevention;
3. sample collection;
4. quality control and quality assurance;
5. sample storage and transport;
6. record management; and
7. laboratory analysis.

**Table 1** below provides the actions to be undertaken following the audit and a summary of the audit findings for each of the key aspects. The completed audit table is provided in Appendix 1.

**Table 1: Audit actions to be undertaken**

| Action   | Accountability         | Due       |
|--|------------------------|-----------|
| Formalise current protocols in place in the form of written procedures and work instructions which detail field sampling, transport and storage                                      | Mel Bolton             | 28-Feb-15 |
| Formalise current protocols in place in the forms of detailed descriptions for collecting, labelling, transporting and storing samples and the necessary ancillary field data.       | Mel Bolton             | 28-Feb-15 |
| Develop specific procedures which specify the sample collection device, type of storage container, preservation procedures, type and numbers of quality control samples to be taken. | Mel Bolton             | 28-Feb-15 |
| Procedures to be developed are to include exact locations of sampling sites and any sub sites  | Mel Bolton             | 28-Feb-15 |
| Formalise current protocols in place in the form of written procedures detailing handling, tracking and correcting data  | Mel Bolton             | 28-Feb-15 |
| Sampling staff are to use disposable plastic gloves during sampling for contamination prevention. New gloves are to be worn at each sampling location.                               | Jesse Ober             | 30-Nov-14 |
| Ensure samples are collected in the appropriate bottles for the analyte being tested (to be formalised through the development of a procedure)                                       | Jesse Ober/ Mel Bolton | 30-Nov-14 |
| Onsite analysis and field records to be provided with the CoC and  | Jesse Ober/ Mel Bolton | 31-Jan-15 |

| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |                               |                  |               |
|---|-------------------------------|------------------|---------------|

| Author  | Mel Bolton                    | Last Approved By | Emma Bamforth |
| Issue Date  | 28/11/2014                    | Next Review Date |               |

| Action  | Accountability            | Due       |
|---|---------------------------|-----------|
| sent with the samples to the Lab  |                           |           |
| Update field data sheet to include weather conditions (wind speed, cloud cover and temperature) and water sample (odour, colour, floating material)   | Mel Bolton                | 31-Dec-14 |
| Field data sheet or report to record the following:<br>- method of sampling<br>- time of sampling<br>- general environmental and climatic conditions<br>- nature of pre-treatment<br>- preservation procedures (i.e. filtering)<br>- data gathered in the field | Mel Bolton                | 31-Dec-14 |
| QA/QC process to be implemented which includes sample blanks for contamination from the field, containers, equipment and transport as well as duplicate and replicate sampling.   | Mel Bolton/<br>Jesse Ober | 28-Feb-15 |
| Develop a calibration log to be stored with all sampling equipment. Ensure regular calibration and that records are maintained.   | Mel Bolton/<br>Jesse Ober | 31-Jan-15 |

### Monitoring Preparation

Monitoring preparation overall is undertaken well. Although sampling protocols are in place, these protocols have not yet been documented as work instructions or procedures. It is the intention that these protocols will be formalised into procedures in the near future. Monitoring Preparation scored 56% in the audit.

### Contamination Prevention

Contamination prevention is currently a very high standard. The only area for improvement is for sampling staff to utilise plastic disposable gloves during sampling. Contamination prevention scored 86% in the audit.

### Sample Collection

Sample collection is undertaken well, although it is recognised there is some room for improvement. The measurement of water levels and sampling of water which is representative of the aquifer is undertaken to a high standard. The field sampling sheets could be updated to document additional information in the field, and also provide the laboratory with additional information pertaining to the samples. Sample collection scored 62% in the audit.

### Quality Control and Quality Assurance

Quality Control and Quality Assurance (QAQC) is the one aspect which is recognised as having the greatest opportunity for improvement. Currently there is no specific QAQC process implemented across the monitoring regime. It is anticipated a rigorous QAQC program will be implemented in the near future. Quality control and quality assurance scored 0% in the audit.

| THIS DOCUMENT IS UNCONTROLLED IN HARD COPY FORMAT |                               |                  |               |
|---|-------------------------------|------------------|---------------|
| Document Name                                     | TGM Monitoring Strategy Audit |                  | 2 of 4        |

| Issue Date  | 28/11/2014                    | Next Review Date |               |

### Sample Storage and Transport

Sample storage and transport is undertaken to a very high standard, and is the one aspect which is currently 100% compliant. Every effort is made to align sampling with available transport, to ensure samples meet holding times, and are received by the laboratory appropriately. Sample storage and transport scored 100% in the audit.

### Record Management

Records are currently maintained well. There are some areas for improvement including, the maintenance of calibration records. Record management scored 80% in the audit.

### Laboratory Analysis

Laboratory analysis covered aspects pertaining to the external laboratory. Some areas could be completed based on the laboratory's NATA accreditation, however more specific requirements were not incorporated into this audit, as they were outside the scope. Laboratory analysis scored 100% in the audit (not including audit components which were not applicable).

| 3    | Sample Collection  | Compliance |    |     | Observations/Findings/Comments  |
|------|--|------------|----|-----|---|
|      |  | Yes        | No | N/A |   |
| 3.1  | Samples are collected in the appropriate bottles for the analyte being tested  |            | X  |     | Until recently - metals have been collected in the green sample bottles. This has been amended for all future sampling.   |
| 3.2  | The depth below ground level at which the sample is taken is always recorded   | X          |    |     | Standing Water Level meter is utilised to record this information.  |
| 3.3  | Water levels are measured before prior to pumping  | X          |    |     | Water levels are always recorded prior to pumping.  |
| 3.4  | Sampling device ensures representative sample of the aquifer is obtained (sample is derived from the aquifer itself and not from stagnant water in the bore).  | X          |    |     | The sampling devices, pumps three times the bore volume, and then once the field measurements stability (pH, TDS and EC), a sample is taken.  |
| 3.5  | Sampling containers are clearly marked in a durable manner, enabling clear identification of all samples in the laboratory   | X          |    |     | Investigating potential use of stickers for clearer labelling, although no problems encountered with current system.  |
| 3.6  | Onsite analysis and field records are included in a report with the sample to the laboratory   |            | X  |     | CoC or field report to be provided to the lab with the samples  |
| 3.7  | Are field notes recorded on the field data sheet including weather conditions (wind speed, cloud cover and temperature) and water sample (odour, colour, floating material etc.)   |            | X  |     | Comments box allows for any unusual items to be noted, however does not specifically require comments on the weather or water sample. Field sheet to be updated to incorporate this.  |
| 3.8  | All field records are documented before leaving a sampling location  | X          |    |     | All field records are documented before leaving a sampling location.  |
| 3.9  | Observations or information on the conditions at the time of sampling that may assist in interpretation of the data are noted on the field record sheet or field notebook.   | X          |    |     | Unusual observations are noted  |
| 3.10 | Field Sampling: Field record sheet includes field register of sample number, site, time, date, type/technique, technician, field data sheet  |            | X  |     | Field data sheet captures some but not all of this information. Field data sheet to be updated to include time and technique.   |
| 3.11 | Field data sheet describes the samples taken, the labels and details.  | X          |    |     | Field data sheet captures some information. Field data sheets to be updated to incorporate some additional information.   |
| 3.12 | The volume of sample collected is sufficient for the required analyses, including any repeat analyses.   | X          |    |     | Only containers provided by the laboratory are utilised.  |
| 3.13 | A sampling report is prepared with the following information:<br>- location (and name) of sampling site, with coordinates and any other relevant locational information<br>- details of sampling point<br>- date of sampling<br>- method of sampling<br>- time of sampling<br>- name of sampler<br>- general environmental and climatic conditions<br>- nature of pre-treatment<br>- preservation procedure<br>- data gathered in the field<br>- any information which may affect the results of the analysis. |            | X  |     | No specific report is compiled, however some of the items are included on the field data sheet. Field data sheet or report to record the following:<br>- method of sampling<br>- time of sampling<br>- general environmental and climatic conditions<br>- nature of pre-treatment<br>- preservation procedures (i.e. filtering)<br>- data gathered in the field |

| 1.6                | Formalise current protocols in place in the form of written procedures and work instructions which detail field sampling, transport and storage   | Mel Bolton             | 28-Feb-15  |
| 1.7                | Formalise current protocols in place in the forms of detailed descriptions for collecting, labelling, transporting and storing samples and the necessary ancillary field data.  | Mel Bolton             | 28-Feb-15  |
| 1.8                | Develop specific procedures which specify the sample collection device, type of storage container, preservation procedures, type and numbers of quality control samples to be taken.  | Mel Bolton             | 28/02/2015 |
| 1.9                | Procedures to be developed are to include exact locations of sampling sites and any sub sites   | Mel Bolton             | 28/02/2015 |
| 1.10               | Formalise current protocols in place in the form of written procedures detailing handling, tracking and correcting data   | Mel Bolton             | 28/02/2015 |
| 2.50               | Sampling staff are to use disposable plastic gloves during sampling for contamination prevention. New gloves are to be worn at each sampling location.  | Jesse Ober             | 30-Nov-14  |
| 3.10               | Ensure samples are collected in the appropriate bottles for the analyte being tested (to be formalised through the development of a procedure)  | Jesse Ober/ Mel Bolton | 30-Nov-14  |
| 3.6                | Onsite analysis and field records to be provided with the CoC and sent with the samples to the Lab  | Jesse Ober/ Mel Bolton | 31-Jan-15  |
| 3.7                | Update field data sheet to include weather conditions (wind speed, cloud cover and temperature) and water sample (odour, colour, floating material)   | Mel Bolton             | 31-Dec-14  |
| 3.10 and 3.13      | Field data sheet or report to record the following:<br>- method of sampling<br>- time of sampling<br>- general environmental and climatic conditions<br>- nature of pre-treatment<br>- preservation procedures (i.e. filtering)<br>- data gathered in the field | Mel Bolton             | 31-Dec-14  |
| 4.1, 4.2, 4.3, 4.4 | QA/QC process to be implemented which includes sample blanks for contamination from the field, containers, equipment and transport as well as duplicate and replicate sampling.   | Mel Bolton/ Jesse Ober | 28-Feb-15  |
| 6.1                | Develop a calibration log to be stored with all sampling equipment. Ensure regular calibration and that records are maintained.   | Mel Bolton/ Jesse Ober | 31-Jan-15  |

## **Appendix 8: Fauna Trench Inspection – Kamikaze borefield**

## MEMORANDUM

**Date:** 28<sup>th</sup> November 2014

**To:** Sustainability Department

**From:** Vanja Sekizovic

**Subject:** Fauna Trench Inspections – Ministerial Statement Report summary

During the 2013/14 reporting year, a number of minor pipelines were installed, mainly at the Kamikaze and the Process Water Supply Borefields. Prior to the trenching and construction activities being undertaken, a Workplace Risk Assessment and Controls (WRACs) were completed. The WRACs include a number of environmental risks and their controls relevant to the scope of works, including fauna egress requirements and trapped fauna trench inspections. An example of the WRAC for Kamikaze Borefield is attached for information (Attachment 1).

All trenches had fauna egress ramps installed at 50m intervals as required, in form of an earthen ramp or similar. In addition, all pipe ends were capped with sample bags to prevent any inadvertent fauna entering the pipelines. Photos from trench inspections conducted are provided in Attachment 2.

The open trenches were inspected twice daily, and recorded on the TGM Trench Inspection Form. Examples of completed forms are provided as Attachment 3.

While no fauna were removed from these trenches, a number were sighted in the area.

Workplace Risk Assessment and Control (WRAC)

|  |  |   |  |
|--|--|---|--|
| WRAC Title: Kamikaze Borefield Expansion Risk Assessment   |  | Date: 25/6/24   |  |
| <p>Operation Description:<br/>Work is progressing on the expansion of the Kamikaze borefield, and thus a risk assessment was conducted to ensure health, safety and environmental risks were understood and assessed prior to commencement</p> |  | <p>Relevant Documents:<br/>General Arrangement Drawings</p>   |  |
| <p>Team Leader:<br/>Belinda Bastow (BB)</p>  |  | <p>Recorded by:<br/>Vani Selkovic</p>   |  |
| <p>Team Members:<br/>Vani Selkovic (VS)<br/>Richard M. (RM)<br/>Mathew Matheson (MM)<br/>Robert McCourt (RMC)<br/>Steve Callaghan (SC)</p>   |  | <p>Relevant SOP:<br/>No relevant SOPs of Work were reviewed.<br/><br/>The scope of the works is the expansion of the Borefield, including the installation of pipelines, transfer tanks, pumps, borehead works and pumps, power supply, connection to the transfer tanks to the existing lines and the set up for future expansion.<br/><br/>Discussion was that there will be 3 people involved in the works, and it will take months to do.</p> |  |

| Completed by Task Team |   | Hazard  | Unwanted Event  | Current Preventative Controls   | Current Recovery Controls | Likelihood        | Consequence   | Risk Rating | Recommended Improvements or New Controls   | By Whom | When                                 |
|------------------------|---|---|---|---|---------------------------|-------------------|---------------|-------------|--|---------|--------------------------------------|
| 1.1                    | Mobilisation of contractor              | Uninformed contractor, incorrect mobilisation   | Contractor not mobilised to site in accordance with procedures  | Utilising existing contractors (Craig Harvey for clearing and Ours for installation)  |                           | Unlikely          | Minor         | Moderate    | Ensure contractors have all the required permits (JHAs, GPs, Dig Permits etc.) and know the requirements. Ensure contractors are provided with a Work Pack.                    | RMc     | Prior to commencement of work        |
| 1.2                    |   | Equipment not compliant with TGM requirements   | Hydrocarbon spills due to damaged equipment, injury to personnel due to machinery tagging out of date, mechanical failure   | Utilising existing contractors (Craig Harvey for clearing and Ours for installation)  |                           | Unlikely          | Minor         | Moderate    | Ensure contractors familiar with TGM requirements and report all spills.   | RMc     | Prior to commencement of work        |
| 1.3                    |   | Mobilisation of transport of goods and plant to site  | Vehicle accident, fatality, damage, fauna interaction, personnel getting lost, loss of load etc   | Utilising existing contractors (Craig Harvey for clearing and Ours for installation). All drivers to be educated. Loading and unloading procedures to be followed (JHAs etc.). Ensure all transported material appropriately secured. |                           | Unlikely          | High          | High        | Ensure all mobilised personnel undertake the induction and have the appropriate driving permissions. Ensure all delivery drivers aware of TGM requirements and DDD procedures. | RMc     | Prior to commencement of work        |
| 1.4                    |   | Lack of communication   | Other teams at TGM not aware of works   |   |                           | Very Likely       | Minor         | Moderate    | Site notifications, TMF and other notices to be clearly communicated site wide and to all relevant teams (BSS, Processing etc.)  | RMc     | Saturday 26 July                     |
| 2.1                    | General hazards                         | Nightshift work - Not occurring   | Interruption of fuel delivery trucks  | Traffic Management Plan to be developed. Site notices to be sent out regarding any closures or interruptions. Minimise interruptions through planning and early consideration and communication with relevant parties.                |                           | Likely            | High          | High        | Develop a TMF for the works. Ensure a 2 week look-ahead is produced to ensure sufficient time to prepare any site notices required.  | RMc     | Prior to interruption of road access |
| 2.2                    |   |   | SV, Pedestrian or truck interaction   | Traffic Management Plan to be developed. Site notices to be sent out regarding any closures or interruptions. Minimise interruptions through planning and early consideration and communication with relevant parties.                |                           | Unlikely          | Major         | Major       | Develop TMF for the works.   | RMc     | Prior to commencement of work        |
| 2.3                    |   |   | Inadequate lighting   | Ensure adequate lighting for nightshift as required.  |                           | Likely            | High          | High        | RM to confirm the requirements, and these to be documented for the work through JHA/SOP or WPs.  | RM      | Prior to commencement of night shift |
| 2.4                    |   | Communications  | ability to call up an emergency   | Team to have radio and phones. Satellite phones for areas where there is no phone communication.  |                           | Unlikely          | High          | High        | Confirm the mobile phone coverage for the works, to ensure constant communication is available.  | RMc     | Prior to commencement of work        |
| 2.5                    |   | Inclement weather   | Lightening strikes personnel  | Inclement weather procedure.  |                           | Likely            | High          | High        | Confirm understanding by all of the inclement weather procedure.   | RMc     | Prior to commencement of work        |
| 2.6                    |   | Waste disposal  | Waste illegally disposed off at the new boxes.  | All waste to be returned to central laydown and the WMF.  |                           | Very Likely       | Minor         | Moderate    | Ensure adequate bins available and a waste strategy understood by all parties, obtain mini skip from Bundara and tarp, collect all waste and return at end of job.             | RMc     | Prior to commencement of work        |
| 2.7                    |   | Loading and unloading of equipment and materials  | Damage to equipment and injury to personnel, incorrect positioning of truck, lack of stable ground, unsecured loads, loads shifting   | Competent and experienced operators, spotters as required, Supervision, load inspections, VIOC, designated laydown areas, Correct PPE, Permits to work  |                           | Likely            | Moderate      | High        | Ensure all required documentation in place and requirements understood. Have obtain copies of tickets for Ours personnel. C Harvey to be check as part of the Kamikaze job.    | RMc     | Prior to commencement of work        |
| 2.8                    |   | Interaction with other traffic  | Vehicle collision   | Driver VIOC requirements, driving to conditions, PPE  |                           | Very unlikely     | High          | High        | JHA to cover controls and traffic management for pipeline trench and installation  | RMc     | Prior to commencement of work        |
| 2.9                    |   | Vehicle / people interactions   | Pedestrian hit by fuel truck  | Traffic Management Plan to be developed. Site notices to be sent out regarding any closures or interruptions. Minimise interruptions through planning and early consideration and communication with relevant parties.                |                           | Very unlikely     | High          | High        | No refueling required by either Ours or C Harvey   | RMc     | Prior to commencement of work        |
| 2.10                   |   | Boom gates  | Vehicles interacting with boom gates, delay in accessing site   | Security/Reception on call (CH12) opening and closing gates.  |                           | Likely            | Minor         | Moderate    | Call up Gate House.  | RMc     | Prior to commencement of work        |
| 2.11                   |   | Spilling of Hypersaline water   | Machinery accidentally cutting the existing pipeline. During the connection of new pipeline to old pipeline, inexperienced people chawine the pipeline leading to a spill and portable water supply interruption. | Excavation Permit. Surveyor have marked pipeline in field and work will be leave 1m from existing clearing provide ~1.3m from existing buried lines   |                           | Likely            | Major         | Major       | AGAA supervision of works. Forward planning. Identification of proposed tie in points early on.  | RMc     | Prior to commencement of work        |
| 2.12                   |   | Unauthorized existing pipeline  | Operators unearthing the pipeline while excavating for new pipeline.  | Excavation Permit. Surveyor have marked pipeline in field and work will be leave 1m from existing clearing provide ~1.3m from existing buried lines   |                           | Likely            | Major         | Major       | AGAA supervision of works. Forward planning. Identification of proposed tie in points early on.  | RMc     | Prior to commencement of work        |
| 2.13                   |   | Tight working area  | Vehicle / pedestrian / asset interaction due to tight working area.   | Competent and experienced operators to undertake works  |                           | Likely            | Major         | Major       | JHA to cover works, appropriate TMF. Clear communications protocols  | RMc     | Prior to commencement of work        |
| 2.14                   |   | Lifting operations (driving, non-driving, fixed hoists, vehicle loading cranes, loading/unloading of pipelines) | Inadequate lifting equipment leading to dropped objects, load striking  | Competent and experienced operators, spotters as required, Supervision, load inspections, VIOC, designated laydown areas, Correct PPE, Permits to work  |                           | Unlikely          | Major         | Major       | Ensure VIOC completed, identify laydown areas and flag as appropriate, obtain appropriate permits, lift studies, exclusion areas   | RMc     | Prior to commencement of work        |
| 2.15                   |   | System not able to be utilised until instal   | Delay in access to adequate water for the Plant.  | Drains not to cut into the pipe until approved by Processing  |                           | Likely            | Moderate      | High        | Develop a schedule for the works with contingencies and aim for Aug shutdown. Processing to approve.   | RMc     | Prior to commencement of work        |
| 2.16                   |   | Inadequate survey control   | Pipeline interfered with due to lack of accuracy of existing survey information. Delay to project due to survey unavailability.   | Previous dfls exist, to be reviewed for accuracy.   |                           | Almost certain    | Moderate      | High        | Install mark pegs and survey to pick up when available.  | RMc     | Prior to commencement of work        |
| 2.17                   |   | Refuelling of machinery   | Spills of hydrocarbon   | Spill kits, only refuel in field what is necessary, all other equipment to be refuelled back on site  |                           | Likely            | Minor         | Moderate    | Supervision of refuelling  | RMc     | Prior to refuelling                  |
| 2.18                   |   | Incorrect machinery, operators used   | Inadequate access to gensets for refuelling   | Permits to consider turn around areas for vehicles  |                           | Likely            | Moderate      | High        | Ours to be supervised by AGAA daily  | RMc     | Prior to construction                |
| 2.19                   |   | Chemicals   | Personal injury, spills, incidents  | Lessons learnt from previous incidents (GPR, Bundara)   |                           | Almost certain    | Minor         | Moderate    | Any chemicals to be approved via ChemAlert and included in JHA   | RMc     | Prior to commencement of work        |
| 2.20                   |   | Chemicals   | Chemical spill, personnel injury from chemicals   | No chemicals (other than hydrocarbons and welding chemicals) proposed.  |                           | Very unlikely     | Minor         | Moderate    |  | RMc     | Prior to commencement of work        |
| 2.21                   |   | In-field servicing  | Spill, personnel injury   | No in field servicing allowed. All servicing to be completed at respective contractor's laydown areas.  |                           | Very unlikely     | Moderate      | Moderate    |  | RMc     | Prior to commencement of work        |
| 2.22                   |   | Dust  | Visibility reduced on road due to trenching   | Not seen as a significant issue, no plan to water the roads   |                           | Almost impossible | Insignificant | Minor       |  | RMc     | Prior to commencement of work        |
| 2.23                   |   | Other   | No confined space, no isolation, no working at heights  |   |                           | Almost impossible | Insignificant | Minor       |  | RMc     | Prior to commencement of work        |
| 3.1                    | Set up of workrate / site establishment | Clearing for crib and other facilities - no onsite facilities   | Unauthorized clearing, damage to infrastructure   | GDP process   |                           | Unlikely          | High          | High        | General arrangement drawings to be produced for the facilities and appropriately approved.   | MM/RMc  | Prior to commencement of work        |
| 3.2                    |   | Installation of temporary facilities such as toilets, ablution facilities, crib room etc - no onsite facilities | Inappropriately located temporary facilities.   | Planning of facilities, JHA   |                           | Unlikely          | Moderate      | High        | General arrangement drawings to be produced for the facilities and appropriately approved.   | RMc     | Prior to commencement of work        |
| 3.3                    |   | Temporary toilets/ablution facilities - no onsite facilities  | Sewerage spill  | Appropriate type of facility, bunding   |                           | Likely            | Moderate      | High        | BB to provide advice on temporary toilets allowed on site  | BB      | Prior to commencement of work        |
| 3.4                    |   |   | Inadequate facilities (hygiene/health issues)   | Ensure adequate facilities on site  |                           | Unlikely          | Moderate      | High        | Verry Lind to provide advice on requirements. Bob to request   | RMc     | Prior to commencement of work        |
| 3.5                    |   |   | Costs associated with disposal off site   | Ensure facilities on site do not need to be disposed off site, with either waste being incinerated or incorporated into TGM waste stream  |                           | Likely            | Minor         | Moderate    | Bob to investigate Fiesta Caravans to hire a van with adequate facilities that do not need disposal off site   | RMc     | Prior to commencement of work        |
| 3.6                    |   | Pipe delivered to site  | Inadequate laydown for pipe delivery  | Designated laydown with adequate area delineated  |                           | Likely            | Minor         | Moderate    | Bob to identify the laydown requirements and exact locations inc. transfer pump area.  | RMc     | Prior to commencement of work        |
| 3.7                    |   | HDPE pipeline exposed to sun (inappropriate storage)  | Inadequate appropriate laydown for pipe with shading  | Designated laydown and forward planning of works.   |                           | Likely            | Minor         | Moderate    | Bob to identify the laydown requirements and exact locations inc. transfer pump area.  | RMc     | Prior to commencement of work        |
| 3.8                    |   | Trailer mounted Genset  | Spill during refueling  | Trailer to be refilled onsite and mobilised each day  |                           | Likely            | Moderate      | High        | Refueling to be undertaken at Bulk diesel tank   | RMc     | Prior to commencement of work        |
| 3.9                    |   |   | Additional turnaround for rigid truck - not planned   | Planning of facilities  |                           | Likely            | Moderate      | High        | General arrangement drawings to be produced for the facilities and appropriately approved.   | RMc     | Prior to commencement of work        |
| 3.10                   |   | Fencing of compound   | Existing fencing inadequate and requires additional fencing   | Planning of facilities, compliance with the Fencing Specification   |                           | Likely            | Minor         | Moderate    | General arrangement drawings to be produced for the facilities and appropriately approved.   | RMc     | Prior to commencement of work        |
| 3.11                   |   | Need to plan the boundaries for fencing while considering the access.   | Existing fencing inadequate and requires additional fencing   | Planning of facilities, compliance with the Fencing Specification   |                           | Likely            | Minor         | Moderate    | General arrangement drawings to be produced for the facilities and appropriately approved.   | RMc     | Prior to commencement of work        |
| 3.12                   |   | Vehicle tracks within the pipeline corridor   | Unauthorized clearing, damage to infrastructure   | JHAs  |                           | Likely            | Moderate      | High        | Windows to be planned and installed  | RMc     | During works                         |
| 4.1                    | Clearing of vegetation                  | Unauthorized clearing   | Vehicles undertaking clearing by driving off tracks, or creating additional disturbances for farm around areas  | GDP process, JHA, work planning   |                           | Almost certain    | Moderate      | High        | General arrangement drawings to be produced for the facilities and tracks and appropriately approved.  | RMc     | Prior to commencement of work        |
| 4.2                    |   | Interaction with existing pipeline  | While clearing, existing pipeline cut into causing a water spill  | Excavation Permit.  |                           | Likely            | Moderate      | High        | Existing pipeline to be identified in the field  | RMc     | Prior to commencement of work        |
| 4.3                    |   | Clearing of bore and pipeline installation  | Clearing outside approved areas   | GDP process   |                           | Likely            | Moderate      | High        | SOP to be read and understood by all in the field.   | RMc     | Prior to commencement of work        |
| 4.4                    |   | Clearing in excess of approval  | Clearing outside approved areas   | GDP process, flagging in the field  |                           | Likely            | High          | High        | Conducted spot checks to confirm clearing width prior to trench establishment. Survey to pick up total clearing once job is finalized  | BB      | Prior to commencement of work        |
| 4.5                    |   | Underestimation of clearing   | Clearing outside approved areas   | GDP process, flagging in the field  |                           | Likely            | Moderate      | High        | Bob to identify additional clearing that may be required   | RMc     | Prior to clearing                    |
| 4.6                    |   | Weeds   | Weeds introduced to area from clearing and unweeded / unhygienic equipment  | Craig Harvey's team utilising existing procedures. Ensure machinery washed down if coming from Porton Creek   |                           | Unlikely          | Moderate      | High        | Only to use equipment based at Porton for this job.  | BB      | Prior to clearing                    |
| 5.1                    | Bore headworks installation             | Concrete of headworks for each bore   | Concrete waste management   | Concrete waste to be returned back to the batch plant without sand  |                           | Likely            | Minor         | Moderate    | Ours to be aware of requirements   | RMc     | Prior to concreting                  |
| 5.2                    |   | Concrete exposure to personnel  | PPE, Experienced operators  |   |                           | Almost certain    | Insignificant | Minor       |  | RMc     | Prior to concreting                  |

Workplace Risk Assessment and Control (WRAC)

| WRAC Title: Kamikaze Borefield Expansion Risk Assessment   |                                  |  |  | Date: 20/6/24   |          |               |   |   |   |                                      |                                     |
|--|----------------------------------|--|--|---|----------|---------------|---|---|---|--------------------------------------|-------------------------------------|
| Operation Description:<br>Work is progressing on the expansion of the Kamikaze borefield, and thus a risk assessment was conducted to ensure health, safety and environmental risks were understood and assessed prior to commencement |                                  |  |  | Relevant Documents:<br>General Arrangement Drawings   |          |               |   | Page:   |   |                                      |                                     |
| 5.3  |                                  | Inadequate clearances for concrete headworks                         |  | Likely  | Minor    | Moderate      | General arrangement drawings to be produced for the headworks at two bores and appropriately approved | RM:   | Prior to concreting   |                                      |                                     |
| 5.4  |                                  | Inadequate concreting of areas under gensets                         |  | Likely  | Minor    | Moderate      | General arrangement drawings to be produced for the headworks at two bores and appropriately approved | RM:   | Prior to concreting   |                                      |                                     |
| 5.5  |                                  | Hyper saline water   | Spill during headworks installation  |   | Likely   | Moderate      | High  | A test procedure to be developed prior to commissioning   | RM:   | Prior to testing                     |                                     |
| 5.6  |                                  | Future development   | Headworks in the wrong location for future redevelopment and pipework tie in                                   |   | Unlikely | Minor         | Moderate  | General arrangement drawings to be produced for the headworks at two bores and appropriately approved | RM:   | Prior to installation and concreting |                                     |
| 6.1  | Trenching                        | Excavation of trench for pipeline installation                       | Lack of fauna egress, lack of inspections  | No more than 1.5km to be excavated/open at one time<br>Twice daily documented trench inspections  |          | Likely        | Moderate  | High  | Daily morning and afternoon trenching inspections to be completed. To be handed over to Hydrogeology or another team when Ours on R&A. Must be completed daily if trench open.  | RM:                                  | Prior to trenching                  |
| 6.2  |                                  | Trenching under roads  | Compromising road condition, damage to pipeline  | To be installed via sleeve or concrete, TMP, bollards   |          | Unlikely      | Moderate  | High  | TMP to be approved for the area. Adequate signage. Bollards installed to indicate pipeline buried underneath. Contact Supply to discuss requires and release site notification well in advance                            | RM:                                  | Prior to encroaching on road.       |
| 6.3  |                                  | Trench inadequate size   | Trench size inadequate to capture all events as required by approvals  |   |          | Likely        | Moderate  | High  | Ensure that the trench engineered in accordance with approval conditions on Sustainability Department's advice  | RM:                                  | Prior to trenching                  |
| 6.4  |                                  | Trenching  | Impacting on existing infrastructure, concrete etc.  | Excavation Permit.  |          | Unlikely      | Moderate  | High  | Ensure all permits in place prior to construction   | RM:                                  | Prior to trenching                  |
| 7.1  | Cutting of pipe                  | Personal injury, damage to plant, damage to environment              | While cutting pipe, person slips and cuts themselves leading to laceration/amputation                          | PPE, Experienced operators, JMCs, Appropriate tools   |          | Unlikely      | Moderate  | High  |   | RM:                                  | Prior to trenching                  |
| 8.1  | Welding                          | Inadequate welding controls  | Welds fail, Hyper saline spills  | Ours to have Welding controls in place (stamps, registers, QA/QC)   |          | Likely        | Moderate  | High  | Bob to ensure Ours has the requirements covered, Mini MDR to be developed and provided to AGAA Maintenance  | RM:                                  | Prior to welding                    |
| 8.2  |                                  | Testing of welds   | Hyper saline spills, injury to personnel   | Testing and commissioning of pipeline to be done during the day and with adequate personnel to inspect the whole line with adequate valves in place         |          | Unlikely      | Moderate  | High  |   | RM:                                  | During testing                      |
| 9.1  | Pipeline burial and installation | Burying and installing of pipe                                       | Hyper saline spills, injury to personnel   | PPE   |          | Likely        | Moderate  | High  |   | RM:                                  |                                     |
| 9.2  |                                  | Installation under road  | Pipeline damaged over long period of time due to lack of sleeving/protection under road                        | Pipeline to be sleeved under road and track crossings or anywhere where it may need to be buried under installation   |          | Unlikely      | Moderate  | High  |   | RM:                                  |                                     |
| 9.3  |                                  | Open/welded pipelines left in situ                                   | Fauna entering the partially installed pipeline  | Ensure all ends taped at end of each shift or during installation   |          | Very likely   | Moderate  | High  | Daily inspections   | RM:                                  | During works                        |
| 9.4  |                                  | Non-compliance with Environmental Design Basis                       | Legal non-compliances  | Ensure familiarity with EDB and requirements. Engineering to comply with EDB and legal obligations. Ensure adequate number of valves to be installed.       |          | Likely        | Major   | Major   | Bob to become familiar with EDB requirements  | RM:                                  | Prior to construction               |
| 9.5  |                                  | Inadequate breathers   | Breathers to be installed as required  | Engineering to be completed for the pipeline to identify requirements. Ensure breathers, if required, to be of the same design as existing (ie. camp proof) |          | Likely        | Major   | Stop  |   | RM:                                  | Prior to construction               |
| 9.6  |                                  | Commissioning of infrastructure                                      | Tie in affects operation of Processing Plant due to stop in water supply                                       | Ensure tie-in dip point coincides with a shutdown.  |          | Very likely   | Major   | High  |   | RM:                                  |                                     |
| 9.8  |                                  | Appropriately certified and installed flow meters                    | Flow meters installed do not accurately reflect the water abstracted, leading to a non-compliance with licence |   |          | Likely        | Moderate  | High  | Bob to ensure all flow meters installed are appropriately calibrated and copies of certificates provided to Sustainability  | RM:                                  | During installation                 |
| 9.7  |                                  | Adequate dip guides and pizzas to be installed                       | Inadequate dip guides installed preventing adequate monitoring   |   |          | Very likely   | Moderate  | High  | Bob to ensure adequate installation and design of the bore setup  | RM:                                  | During installation                 |
| 10.1   | Post installation                | Buried pipe  | Damage to infrastructure from vehicles crossing  | Pipeline to be installed on the eastern side of the existing or so vehicles do not need to cross, with windrows   |          | Very likely   | Major   | High  | Consider 2 windrows on either side of the pipeline as they do at KGM. Bollards to be installed at all locations where the pipeline crosses under the road to indicate pipeline buried underneath. Signage to be installed | RM:                                  | Post construction                   |
| 10.2   |                                  | Lack of timely survey for post installation survey prior to backfill | Inadequate survey of installed pipeline prior to backfill. Trenches left open for extended period of time      | Fauna egress, twice daily inspections   |          | Very likely   | Moderate  | High  | Ensure a plan is developed for when survey would be required and clear communications with Survey team  | RM:                                  | Prior to backfilling                |
| 10.3   |                                  | Infrastructure not meeting the AGAA standard                         | Diesel generator does not have requirements such as fire extinguisher, self banded tank etc.                   | Ensure all equipment inspected prior to installation.   |          | Very unlikely | Moderate  | Moderate  | Bob to ensure the installed infrastructure meets the intent of sustainability, safety and emergency response on site  | RM:                                  | Prior to works completing           |
| 10.4   |                                  | Settling of road due to pipeline installed underneath                | Road condition deteriorates due to installation of pipeline  |   |          | Likely        | Moderate  | High  | TMP to be approved for the area. Speed limits to be reduced until road settled. Roads to be inspected on regular basis post installation to verify adequacy.  | RM:                                  | Prior to works completing           |
| 11.1   | Inspection points                | Inspection points to have lids installed - requires a crane          | Crane access impedes access, crane incidents   |   |          | Very unlikely | Moderate  | Moderate  | Lids to be modified so they have inspection hatches   | RM:                                  | Prior to installing inspection pits |
| 12.1   | Rehabilitation                   | Existing sumps and turkeys nests filled in                           | Existing backfilling inadequate  | Review prior to commencement of work to make area safe  |          | Very unlikely | Minor   | Moderate  | Review area prior to commencement of work   | RM:                                  | Prior to commencement of work       |
| 12.2   |                                  | Vegetation and Growth Medium Recovery from new clearing              | Inadequate availability of material for rehabilitation   | Site walkover prior to clearing, identification of stockpile locations  |          | Likely        | Moderate  | High  | Site walkover with Bob and Craig  | VS                                   | Prior to commencement of work       |
|  |                                  |  |  |   |          |               |   | 0   |   |                                      |                                     |
|  |                                  |  |  |   |          |               |   | 0   |   |                                      |                                     |
